**Too Many Children Left Behind** Bruce Bradbury, Miles Corak, Jane Waldfogel, Elizabeth Washbrook, 2015-06-30 The belief that with hard work and determination all children have the opportunity to succeed in life is a cherished part of the American Dream Yet increased inequality in America has made that dream more difficult for many to obtain In Too Many Children Left Behind an international team of social scientists assesses how social mobility varies in the United States compared with Australia Canada and the United Kingdom Bruce Bradbury Miles Corak Jane Waldfogel and Elizabeth Washbrook show that the academic achievement gap between disadvantaged American children and their more advantaged peers is far greater than in other wealthy countries with serious consequences for their future life outcomes With education the key to expanding opportunities for those born into low socioeconomic status families Too Many Children Left Behind helps us better understand educational disparities and how to reduce them Analyzing data on 8 000 school children in the United States the

authors demonstrate that disadvantages that begin early in life have long lasting effects on academic performance The social inequalities that children experience before they start school contribute to a large gap in test scores between low and high SES students later in life Many children from low SES backgrounds lack critical resources including books high quality child care and other goods and services that foster the stimulating environment necessary for cognitive development The authors find that not only is a child's academic success deeply tied to his or her family background but that this class based achievement gap does not narrow as the child proceeds through school The authors compare test score gaps from the United States with those from three other countries and find smaller achievement gaps and greater social mobility in all three particularly in Canada The wider availability of public resources for disadvantaged children in those countries facilitates the early child development that is fundamental for academic success All three countries provide stronger social services than the United States including universal health insurance universal preschool paid parental leave and other supports The authors conclude that the United States could narrow its achievement gap by adopting public policies that expand support for children in the form of tax credits parenting programs and pre K

really learn and what teachers must do to optimally tap children's latent abilities. During the last three decades, education reformers have pushed standardized testing and policies like No Child Left Behind and Common Core to improve test scores and proficiency in basic skills. However, during this period, that author Thomas Armstrong calls the miseducation of America, a number of troubling trends have surfaced, including a decrease in creative thinking scores among children in kindergarten through third grade. Rather than focus on what's wrong with the education system that has produced these outcomes, Armstrong lays out what creative thinkers know about how children should be educated. In an extended thought experiment, he asks what would happen if we turned the reins of educational policy over not to the politicians and educational bureaucrats but to eminent thinkers and creators like Albert Einstein, Pablo Picasso, Martin Luther King Jr., Rachel Carson, Doris Lessing, Jane Goodall, and other seminal culture builders. What might they say about the best way to educate a child? If Einstein ran the schools, suggests that the answers to this intriguing question should guide future efforts to reform our nation's schools.

*An Age of Accountability* John L. Rury, 2023-10-13 *An Age of Accountability* highlights the role of test-based accountability as a policy framework in American education from 1970 to 2020. For more than half a century, the quest to hold schools and educators accountable for academic achievement has relied almost exclusively on standardized assessment. The theory of change embedded in almost all test-based accountability programs held that assessment with stipulated consequences could lead to major improvements in schools. This was accomplished politically by proclaiming lofty goals of attaining universal proficiency and closing achievement gaps, which repeatedly failed to materialize. But even after very clear disappointments, no other policy framework has emerged to challenge its hegemony. The American public today has little confidence in institutions to improve the quality of goods and services they provide, especially in the public sector. As a consequence, many Americans continue to believe that accountability remains a vital necessity, even if educators and policy scholars disagree.

**Global Perspectives on Inclusive Teacher Education** Rice, Bethany M., 2019-03-01 Inclusive teacher preparation varies greatly in format and practice, yet programs grapple with the same underlying challenges: which practices work and where do they work? As children with disabilities are increasingly being included in schools, it is essential that guidance is put into place on how best to adapt inclusive practices into the classroom and create new practices based on the cultural context. *Global Perspectives on Inclusive Teacher Education* summarizes existing research on inclusive practices globally while presenting emerging research and opportunities for cementing change in inclusive teacher education locally, including examples of how inclusive practices are integrated in and adapted to diverse cultural contexts. Covering topics that include critical pedagogy, religious schooling, and teacher education, this publication is designed for curriculum developers, instructional designers, administrators, higher education faculty, educators, policymakers, and students.

**On the Road to High-Quality Early Learning** Majorie E. Wechsler, David L. Kirp, Titilayo Tinubu Ali, Madelyn Gardner, Anna Maier, Hanna Melnick, Patrick M. Shields, 2018-06-22 The authors describe and analyze how four states—Michigan, West Virginia, Washington,

and North Carolina have built early education systems that positively affect student outcomes providing a much needed richly detailed look at how states can design fund and manage exemplary programs
