This book explores the emergence and growth of state responsibility for safer and healthier working practices in British mining and the responses of labour and industry to expanding regulation and control It begins with an assessment of working practice in the coal and metalliferous mining industries at the dawn of the nineteenth century and the hazards involved for the miners before charting the rise of reforming interest in these industries The 1850 Act for the Inspection of Coal Mines in Great Britain brought tighter legislation in coal mining yet the metalliferous miners continued to work without government regulated safety and health controls until the early 1870s The author explores the reasons for this taking into account socio economic environmental medical technical and cultural factors that determined the chronology and nature of early reform The comparative approach between the coal and metalliferous mining sectors provides a useful model for exploring the significance of organized labour in gaining health and safety concessions particularly as the miners in the metalliferous sector in contrast to the colliers who unionised early placed a high value on independence and self sufficiency in the workplace As an investigation into the formation of health and safety legislation in a major industry this work will be valuable to all those with an interest in medical history occupational health legal history and the social history of work in the nineteenth century      **Metal Worker, Plumber and Steam Fitter** ,1908      **Mining Journal, Railway & Commercial Gazette** ,1911      **Engineering and Mining Journal** ,1881      The Encyclopædia Britannica Hugh Chisholm, 1911

Report on the Ventilation of Mines and Collieries John Phillips, 1850      The Pit Sinkers of Northumberland and Durham Peter Ford Mason, 2012-08-01 Shaft sinking for the extraction of minerals has taken place for centuries and for much of this time coal mining was carried out in the North East of England Various methods of pit sinking developed from the use of shallow bell pits to the excavation of deep shafts in order to access rich seams of coal and other minerals for sale in rapidly urbanising areas such as London In the close mining communities of Northumberland and Durham those who dug the initial shafts the sinkers themselves were regarded as the mining elite This book not only tells the story of mining itself through upheaval and technological developments but also focuses on the lives of miners and their families above ground in the emerging pit towns and villages places where religion and miners' games were an integral part of life Peter Ford Mason descended from three generations of County Durham miners has written a fascinating investigation into mining society which makes a compelling read for anyone interested in the social history of the North East or the mining industry as a whole
