

THE SCIENCE OF THE MIND
LESSON 10
Stress and Emotions

Stressors from both the outside (or physical) and inside (or biological) worlds are not equivalent for everybody. Each individual has a unique response to stressors and a unique set of biological and psychological responses.

In a group of individuals, some will be more stressed than others. This is because of genetic and environmental differences. Some individuals are more stressed than others. They are not all the same. In fact, some are more stressed than others. This is because of genetic and environmental differences. Some individuals are more stressed than others. They are not all the same.

All participants showed a similar level of stress. This was because the researchers used the same test. The test was the same for all participants. This was because the researchers used the same test. The test was the same for all participants. This was because the researchers used the same test. The test was the same for all participants.
