On the Move to Meaningful Internet Systems 2004: OTM 2004 Workshops Zahir Tari, Angelo Corsaro, 2004-10-14 A special mention for 2004 is in order for the new Doctoral Symposium Workshop where three young postdoc researchers organized an original setup and formula to bring PhD students together and allow them to submit their research proposals for selection. A limited number of the submissions and their approaches were independently evaluated by a panel of senior experts at the conference and presented by the students in front of a wider audience. These students also got free access to all other parts of the OTM program and only paid a heavily discounted fee for the Doctoral Symposium itself. In fact, their attendance was largely sponsored by the other participants. If evaluated as successful, it is the intention of the General Chairs to expand this model in future editions of the OTM conferences and so draw in an audience of young researchers to the OnTheMove forum. All three main conferences and the associated workshops share the distributed aspects of modern computing systems and the resulting

applicati pull created by the Internet and the so called Semantic Web For DOA 2004 the primary emphasis stayed on the distributed object infrastructure for ODBASE 2004 it was the knowledge bases and methods required for enabling the use of formal semantics and for CoopIS 2004 the main topic was the interaction of such technologies and methods with management issues such as occurs in networked organizations These subject areas naturally overlap and many submissions in

fact also treat envisaged mutual impacts among them **On the Move to Meaningful Internet Systems 2004: OTM 2004**

Workshops R. Meersman, 2004-10-14 This book constitutes the joint refereed proceedings of seven international workshops held as part of OTM 2004 in Agia Napa Cyprus in October 2004 The 73 revised papers presented together with 31 abstracts of posters from the OTM main conferences were carefully reviewed and selected from more than 150 submissions In accordance with the 7 workshops the papers are organized in topical sections on grid computing and its applications to data analysis Java technologies for real time and embedded systems modeling inter organizational systems regulatory ontologies ontologies semantics and e learning PhD symposium and interoperability *On the Move to Meaningful Internet Systems 2002: CoopIS, DOA, and ODBASE* Zahir Tari, 2002-10-16 This book constitutes the refereed proceedings of the three

confederated conferences CoopIS 2002 DOA 2002 and ODBASE 2002 held in Irvine CA USA in October November 2002 The 77 revised full papers and 10 posters presented were carefully reviewed and selected from a total of 291 submissions The papers are organized in topical sections on interoperability workflow mobility agents peer to peer and ubiquitous work process business and transaction infrastructure query processing quality issues agents and middleware cooperative systems ORB enhancements Web services distributed object scalability and heterogeneity dependability and security reflection and reconfiguration real time scheduling component based applications ontology languages conceptual modeling ontology management ontology development and engineering XML and data integration and tools for the intelligent Web *Java Regular Expressions* Mehran Habibi, 2008-01-01 Java has always been an excellent language for working with objects But Java's text manipulation mechanisms have always been limited compared to languages like AWK and Perl On the flip side a regular expressions package in Java 2 Standard Edition J2SE brings hope to the Java text mechanisms This package provides you everything necessary to use regular expressions all packaged in a simplified object oriented framework In addition to working examples and best practices this book features a detailed API reference with examples supporting nearly every method and a step by step tutorial to create your own regular expressions With time you'll discover that regular expressions are extremely powerful in your programming arsenal and you'll enjoy using them And once you've mastered these tools you'll wonder how you ever managed without them **Multithreaded Programming with Java Technology** Bil Lewis, Daniel J. Berg, 2000 Multithreaded Programming with Java Technology is the first complete guide to multithreaded development with the Java 2 platform Multithreading experts Bil Lewis and Daniel J Berg cover the underlying structures upon which threads are built thread construction and thread lifecycles including birth life death and cancellation Next using extensive code
