

# Using Simulink® and Stateflow™ in Automotive Applications

---

**Abstract**

This book includes nine examples that represent typical design tasks of an automotive engineer. It shows how The MathWorks modeling and simulation tools, Simulink® and Stateflow™ facilitate the design of automotive control systems. Each example explains the principles of the physical situation, and presents the equations that represent the system. The examples show how to proceed from the physical equations to the Simulink block diagram. Once the Simulink model has been completed, we run the simulation, analyze the results, and draw conclusions from the study.

Industrial Methods for the Effective Development and Testing of Defense Systems National Research Council, Division on Engineering and Physical Sciences, Board on Army Science and Technology, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Panel on Industrial Methods for the Effective Test and Development of Defense Systems, 2012-01-27 During the past decade and a half the National Research Council through its Committee on National Statistics has carried out a number of studies on the application of statistical methods to improve the testing and development of defense systems. These studies were intended to provide advice to the Department of Defense (DOD) which sponsored these studies. The previous studies have been concerned with the role of statistical methods in testing and evaluation, reliability practices, software methods, combining information and evolutionary acquisition. Industrial Methods for the Effective Testing and Development of Defense Systems is the latest in a series of studies and unlike earlier studies this report identifies current engineering practices that have proved successful in industrial applications for system development and testing. This report explores how developmental and operational testing, modeling and simulation and related techniques can improve the development and performance of defense systems, particularly techniques that have been shown to be effective in industrial applications and are likely to be useful in defense system development. In addition to the broad issues the report identifies three specific topics for its focus: finding failure modes, earlier technology maturity and use of all relevant information for operational assessments.
