General Information

Installation and service instructions in this manual are applicable to the three types of steam/hot water unit heaters which should be installed in their proper applications for their most effective function as overhead heating units.

The copper coils are warranted for operation at steam or hot water pressures up to 150 lbs. per sq. in. gauge, and at temperatures up to 375°F, superheated tube units are warranted for operating pressures up to 250 PSI and operating temperatures up to 400°F. Canadian Standards Association (CSA) requirements state that explosion-proof units may not be used with a fluid temperature in excess of 329°F and still maintain their explosion-proof rating, for national electric code ignition temperature rating T3B for grain dust.

Motors are designed for continuous duty. They can operate in a maximum ambient temperature of 104°F (40°C).

The unit heaters are listed by the Canadian Standards Association as certified and Canadian Registered heat exchangers CRN DH 9234-5G. *Does not apply to WPT 602.

IMPORTANT

The use of this manual is specifically intended for a qualified installation and service agency. A qualified installation and service agency must perform all installation and service of these appliances.

Inspection On Arrival

1. Inspect unit upon arrival. In case of damage, report it immediately to transportation company and your local factory sales representative.
2. Check rating plate on unit to verify that power supply meets available electric power at point of installation.
3. Inspect unit received for conformance with description of product ordered (including specifications where applicable).

⚠ CAUTION

Do not remove outlet fan guard from vertical type unit heaters.
Use caution not to overtighten connections.

Steam horizontal and vertical delivery unit heaters are available in both standard and low-outlet temperature models. Low outlet temperature models are recommended primarily for installation on heating systems with steam pressures of 30 to 150 PSI. When used at these steam pressures they provide lower outlet air temperatures for longer heat throw and, because of wider fin spacing, they are less susceptible to clogging in dusty atmospheres.

The model number of each unit heater indicates its rated Btu/hr. capacity/1000 of 2 lbs. steam pressure and 60°F entering air temperature. For example an H58-60 has an output of 60,000 Btu/hr. at 2 lbs. steam and 60°F entering air.
