

1 | Overview

The DS2227 Series POPPT Modules includes the DS2227S (with magnetic tamper switch) and the DS2227U (without tamper). They are used with a compatible control panel to expand beyond its standard number of on-board initiating points. Future system expansion is more economical as the DS2227 Series POPPTs can be added anywhere along the two-wire data expansion loop. Both modules include proven technology that combines point supervision with individual device addressing on one pair of wires. Some terminals provide reliable connections for the data expansion loop and supervised sensor loop wiring. The units are small and easily installed in standard outlet boxes, above false ceilings, closets, or other accessible locations.

2 | Installation

Use the steps in this section to install and configure the POPPT module.

2.1 | Remove the cover

- Insert a small flat-head screwdriver into one of the small slots in the side of the POPPT.
- Twist the screwdriver and remove the cover.

2.2 | Remove the PCB

- Grasp the terminal block on the PCB in one hand.
- Three tabs hold the PCB in the end with the two tabs, carefully but firmly, push one tab away from the PCB and lift the corner.
- Carefully but firmly, push the other tab away from the PCB and lift the entire PCB from the base.

2.3 | Mount the POPPT base

Pull the wiring through the wiring opening. Refer to Figure 12. Mount the POPPT base using the supplied hardware to prevent shorting the PCB.

2.4 | Replace the PCB

- Grasp the terminal block on the PCB with one hand, insert the DIP switch out of the PCB under the single tab.
- Carefully but firmly, pull the two tabs on the opposite ends away from the PCB.
- Gently lay the PCB in place and, if necessary, carefully, push the two tabs toward the PCB until the PCB is firmly in place.
