

Unloading from both sides (Standard fork tines)

Approach the load straight and square, don't ride the forks until you are a few feet away from the truck.

For light loads unloading the first is fine - for heavier loads, bring the load back a bit, stop, and fully insert the forks to safely lift.

Forks are pushed tightly together, lift a little then side shift away from the load - this will prevent accidental product damage.

Slowly reverse the load out and apply back tilt to stabilize the load.

Before unloading, check the length of the fork tines when they are inserted in a standard sized pallet - most will only be about 3/4 the span of the pallet, which is fine. Older fork tines however, may be longer than a pallet, and may stick out, causing the load to be unintentionally moved or tipped.

Set the load down in a safe place and inspect for damage - for the purposes of this illustration, the load would be moved after this.

To unload the other side, the driver will open up the other side and simply repeat the steps shown here.
