*21st-Century Statecraft* Nayef Al-Rodhan, 2022-07-28

From civilisational frontier risks associated with new challenges like disruptive technologies to the shifting nature of great power conflicts and subversion, the 21st century requires a new approach to statecraft. In *21st Century Statecraft*, Professor Nayef Al-Rodhan proposes five innovative statecraft concepts. He makes the case for a new method of geopolitical analysis called meta-geopolitics and for dignity-based governance. He shows how, in an interdependent and interconnected world, traditional thinking must move beyond zero-sum games and focus on multi-sum and symbiotic realist interstate relations. This requires a new paradigm of global security premised on five dimensions of security and a new concept of power, just power, which highlights the centrality of justice to state interests. These concepts enable states to balance competing interests and work towards what the author calls reconciliation statecraft. Throughout, Professor Al-Rodhan brings his philosophical and neuroscientific expertise to bear, providing a practical model for conducting statecraft in a sustainable way.

*The Carbon Farming Solution* Eric Toensmeier, 2016-02-22

With carbon farming, agriculture ceases to be part of the climate problem and becomes a critical part of the solution. This book is the toolkit for making the soil itself a sponge for carbon. It's a powerful vision. Bill McKibben: *The Carbon Farming Solution* is a book we will look back upon decades from now and wonder why something so critically relevant could have been so overlooked until that time. It describes the foundation of the future of civilization. Paul Hawken: In this groundbreaking book, Eric Toensmeier argues that agriculture, specifically the subset of practices known as carbon farming, can and should be a linchpin of a global climate solutions platform. Carbon farming is a suite of agricultural practices and crops that sequester carbon in the soil and in above-ground biomass. Combined with a massive reduction in fossil fuel emissions and in concert with adaptation strategies to our changing environment, carbon farming has the potential to bring us back from the brink of disaster and return our atmosphere to the magic number of 350 parts per million of carbon dioxide. Toensmeier's book is the first to bring together these powerful strategies in one place. Includes in-depth analysis of the available research. Carbon farming can take many forms. The simplest practices involve modifications to annual crop production. Although many of these modifications have relatively low sequestration potential, they are widely applicable and easily adopted and thus have excellent potential to mitigate climate change if practiced on a global scale. Likewise, grazing systems such as silvopasture are easily replicable, don't require significant changes to human

diet and given the amount of agricultural land worldwide that is devoted to pasture can be important strategies in the carbon farming arsenal. But by far agroforestry practices and perennial crops present the best opportunities for sequestration. While many of these systems are challenging to establish and manage and would require us to change our diets to new and largely unfamiliar perennial crops, they also offer huge potential that has been almost entirely ignored by climate crusaders. Many of these carbon farming practices are already implemented globally on a scale of millions of hectares. These are not minor or marginal efforts but win-win solutions that provide food, fodder and feedstocks while fostering community self-reliance, creating jobs, protecting biodiversity and repairing degraded land, all while sequestering carbon, reducing emissions and ultimately contributing to a climate that will remain amenable to human civilization. Just as importantly to a livable future, these crops and practices can contribute to broader social goals such as women's empowerment, food sovereignty and climate justice. The Carbon Farming Solution is at its root a toolkit and the most complete collection of climate-friendly crops and practices currently available. With this toolkit, farmers, communities and governments large and small can successfully launch carbon farming projects with the most appropriate crops and practices to their climate, locale and socioeconomic needs. Toensmeier's ultimate goal is to place carbon farming firmly in the center of the climate solutions platform alongside clean solar and wind energy. With The Carbon Farming Solution, Toensmeier wants to change the discussion, impact policy decisions and steer mitigation funds to the research projects and people around the world who envision a future where agriculture becomes the protagonist in this fraught, urgent and unprecedented drama of our time. Citizens, farmers and funders will be inspired to use the tools presented in this important book to transform degraded lands around the world into productive carbon-storing landscapes.

General Technical Report NE, 1980      Inorganic Biomaterials Wolfram Höland, Aldo R. Boccaccini, 2016-04-04

Inorganic biomaterials include materials for e.g. dental restorations, biocompatible materials for orthopedic appliances and bioactive materials. However, inorganic biomaterials are also developed for use in tissue regeneration e.g. wound healing. These products either consist of crystalline phases such as  $Al_2O_3$  or  $ZrO_2$  which makes them suitable for use in hip bone replacement or they are composed of tricalcium phosphate and used as resorbable biomaterials. Or they contain glassy phases such as BIOGLASS and are employed as bioactive biomaterials to bond to living bone. Inorganic biomaterials are also used to develop inorganic-organic composites which are suitable for use as bioactive products or to produce dental filling materials. In general, the development of composites is state of the art. However, it is also a future technology. Biomaterials for dental restorations consist of glassy or crystalline phases. Glass ceramics represent a special group of inorganic biomaterials for dental restorations. Glass ceramics are composed of at least one inorganic glassy phase and at least one crystalline phase. These products demonstrate a combination of properties which include excellent aesthetics and the ability to mimic the optical properties of natural teeth as well as high strength and toughness. They can be processed using special processing procedures e.g. machining, moulding and sintering to fabricate high-quality products. Sintered oxide

ceramics such as  $\text{Al}_2\text{O}_3$  or  $\text{ZrO}_2$  are also used for the fabrication of dental restorations. These products can be veneered with other biomaterials or they can be polished to achieve the best possible surface quality. The manuscripts dealing with inorganic biomaterials should focus on the development of the products especially on their chemical nature, the phase formation processes and all the details related to their processing. Very important are the mechanisms of phase formation. The reader of the manuscript should understand all of these reactions in detail. As far as application is concerned, it is important to describe the main properties of the developed products based on the valid standards, e.g. the ISO standards. The papers published should show that the products comply with these standards. It is very important to understand the relationship between biomass and biomaterials. This will help young scientists to follow the development of biomaterials with new unexpected properties. The manuscripts published in *Frontiers* should also focus on the application of the biomaterials. Every manuscript should show the most important application of the material presented. There are different journals that deal with specific product categories, e.g. *Dental Materials*. However, *Frontiers* should allow young scientists to publish their research results using all kinds of inorganic biomaterials. On the other hand, fundamental discussion and analysis of the findings should be encouraged and conclusions about possible applications in the field of medicine and dentistry should be drawn.
