Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. Label one of the **skulls** below as human and the other as a chimpanzee skull.

	Human			Chimpanzee
---	-------	--	---	------------

2. What features did you use to identify which skull was human and which was chimpanzee?

The chimpanzee has a longer skull and larger jaw bone.

Gizmo Warm-up

In 1924, a fossilized skull that looked very similar to a chimp skull was discovered. But the skull most definitely did not belong to a chimp. The location of the **foramen magnum**—a hole in the skull where the spinal cord exits—indicated that the individual was **bipedal**, or walked on two legs. This fossil was some of the earliest evidence of human evolution. Using the *Human Evolution – Skull Analysis* Gizmo, you will discover some of the ways that skulls can be used to learn about human evolution. Start by comparing two modern **hominids**: a human and a chimpanzee.

1. Examine the **Front view** of the *Homo sapiens* (modern human) skull, use the **Select skull** menu to examine the same view of the *Pan troglodytes* (chimp) skull.

Then,

How do the skulls compare?

The human skull has a smaller jaw, smaller teeth, and a larger forehead. Chimpanzees also have a larger nose.

Human Evolution Skull Analysis:

The Evolution Delusion Bart Rask, 2021-09-01 Does the field of evolution differ from other sciences The author a reviewer for a major medical journal scrutinized hundreds of scientific references in evolutionary literature adopting the same standards used for studies submitted for medical publication The data show that there are two types of evolution microevolution and macroevolution with a clear boundary between them based upon the presence and absence of empirical evidence respectively The surprising results show that there is a universal disconnect between the data and the conclusions that claim to show the larger changes of macroevolution The author reveals patterns of deviations from standard scientific methods in these studies For the first time evolutionary data have been summarized to describe both what evolution can and cannot accomplish The author shows the reader how to recognize the different ways in which the evidence for microevolution within and between some species differs from the unsupported macroevolution of most species Previous critiques of macroevolution have been debunked by advocates who have cited a multitude of scientific studies This book goes beyond previous critiques by directly addressing the data from these studies to see if they do in fact support macroevolution focused conclusions Many expert counterarguments against this book's thesis are presented and examined in the context of scientific research to reassure the reader that the author has left no stone unturned in the macroevolution debate A theory is proposed as to why there may be no empirical evidence for macroevolution The book concludes with a section entitled What we see differently There the author shows the reader the differences in perspective between the evolutionist and macroevolution critic as they look at and interpret the very same set of data

Rethinking Human Evolution Jeffrey H. Schwartz, 2022-11-01 Contributors from a range of disciplines consider the disconnect between human evolutionary studies and the rest of evolutionary biology The study of human evolution often seems to rely on scenarios and received wisdom rather than theory and methodology with each new fossil or molecular analysis interpreted as supporting evidence for the presumed lineage of human ancestry We might wonder why we should pursue new inquiries if we already know the story Is paleoanthropology an evolutionary science Are analyses of human evolution biological In this volume contributors from disciplines that range from paleoanthropology to philosophy of science consider the disconnect between human evolutionary studies and the rest of evolutionary biology All of the contributors reflect on their own research and its disciplinary context considering how their fields of inquiry can move forward in new ways The goal is to encourage a more multifaceted intellectual environment for the understanding of human evolution Topics discussed include paleoanthropology's history of procedural idiosyncrasies the role of mind and society in our evolutionary past humans as large mammals rather than a special case genomic analyses computational approaches to phylogenetic reconstruction descriptive morphology versus morphometrics and integrating insights from archaeology into the interpretation of human fossils Contributors Markus Bastir Fred L Bookstein Claudine Cohen Richard G Delisle Robin Dennell Rob DeSalle John de Vos Emma M Finestone Huw S Groucutt Gabriele A Macho

Human Evolution Camilo J. Cela-Conde, Francisco J. Ayala, 2007-09-27 This book is intended as a comprehensive overview of hominid evolution synthesising data and approaches from physical anthropology genetics archaeology psychology and philosophy Human evolution courses are now widespread and this book has the potential to satisfy the requirements of most particularly at the advanced undergraduate and graduate level It is based on a translation albeit with substantial modification of a successful Spanish language book God's Brain Lionel Tiger, Michael McGuire, The joint effort of two distinguished authors and scholars is impressive It manages to bring the experience and energy of both men together in one pithy provocative package Washington Times With economy evidence and no little wit and elegance Lionel Tiger and Michael McGuire look for the answer to religion s ubiquity and persistence in the only place possible the human brain To say more would be to give away their answer and that would spoil a great read and a serious and informative argument This is easily the best book on the nature of religion to appear for a long time Robin Fox University Professor of Social Theory Rutgers University If God s Brain sounds whimsically paradoxical it is only because the authors believe that most people of faith have been looking for God in all the wrong places The authors suggest that religious believers should look inward rather than outward to find God The book is a well written easy to read unique perspective on religion Yes God has a brain The book will captivate all but the piously religious faint of heart Jay R Feierman Editor The Biology of Religious Behavior The Evolutionary Origins of Faith and Religion Two distinguished authors radically alter the fractious debate on the existence of God and the nature of religion Taking a perspective rooted in evolutionary biology with a focus on brain science renowned anthropologist Lionel Tiger and pioneering neuroscientist Michael McGuire a primary discoverer of serotonin s crucial role in brain chemistry elucidate the perennial questions about religion What is its purpose How did it arise What is its source Why does every known culture have some form of it Their answer is deceptively simple yet at the same time highly complex The brain creates religion and its varied concepts of God and then in turn feeds on its creation to satisfy innate neurological and associated social needs Brain science reveals that humans and other primates alike are afflicted by unavoidable sources of

stress that the authors describe as brainpain To cope with this affliction people seek to brainsoothe We humans use religion and its social structures to induce brainsoothing as a relief for innate anxiety How we do this is the subject of this groundbreaking book In a concise lively accessible and witty style the authors combine zoom lens vignettes of religious practices with discussions of the latest research on religion s neurological effects on the brain Among other topics they consider religion s role in providing positive socialization its seeming obsession with regulating sex creating an afterlife how religion s rules of behavior influence the law the common biological scaffolding between nonhuman primates and humans and how this affects religion a detailed look at brain chemistry and how it changes as a result of stress and evidence that the palliative effects of religion on brain chemistry is not matched by nonreligious remedies Concluding with a checklist offering readers a means to compute their own brainsoothe score this fascinating book provides key insights into the complexities of our brain and the role of religion perhaps its most remarkable creation Lionel Tiger New York NY is the bestselling author of *Men in Groups* *The Imperial Animal* with Robin Fox *The Pursuit of Pleasure* *Optimism* *The Biology of Hope* and *The Decline of Males* His articles have appeared in the *New York Times* the *Wall Street Journal* *Rolling Stone* *Harvard Business Review* and *Brain and Behavioral Science* He is the Charles Darwin Professor of Anthropology at Rutgers University Michael McGuire MD Cottonwood CA is the author or editor of ten books including *Darwinian Psychiatry* with A Troisi He is the president of the Biomedical Research Foundation director of the Bradshaw Foundation and the Gruter Institute of Law and Behavior and a trustee of the International Society of Human Ethology Formerly he was a professor

Poirier, W Scott McGraw, 2015-10-16 For the one term course in human evolution paleoanthropology or fossil hominins taught at the junior senior level in departments of anthropology or biology This new edition provides a comprehensive overview to the field of paleoanthropology the study of human evolution by analyzing fossil remains It includes the latest fossil finds attempts to place humans into the context of geological and biological change on the planet and presents current controversies in an even handed manner

Human Evolution Jon Schiller, 2010-04 Your author decided to write this book about Human Evolution after seeing a Science Program about Evolution on KCET the Public Service TV Station in the Los Angeles area I was impressed with the amount of research going on in this area trying to find out where we Homosapiens came from I decided to use the Google and Yahoo search engines to find out the latest probes which I used for this book I have included the many reference sources so the reader can visit these Internet accounts to keep up with what is happening after this book is published In other words this is a snapshot in time report of what is happening research wise at the end of the first decade of the 21st Century

Processes in Human Evolution Francisco J. Ayala, Camilo J. Cela-Conde, 2017-03-01 The discoveries of the last decade have brought about a completely revised understanding of human evolution due to the recent advances in genetics palaeontology ecology archaeology geography and climate science Written by two leading authorities in the fields of physical anthropology and molecular evolution *Processes in Human*

Evolution presents a reconsidered overview of hominid evolution synthesising data and approaches from a range of interdisciplinary fields. The authors pay particular attention to population migrations since these are crucial in understanding the origin and dispersion of the different genera and species in each continent and to the emergence of the lithic cultures and their impact on the evolution of cognitive capacities. Processes in Human Evolution is intended as a primary textbook for university courses on human evolution and may also be used as supplementary reading in advanced undergraduate and graduate courses. It is also suitable for a more general audience seeking a readable but up to date and inclusive treatment of human origins and evolution.
