

Chapter 8: Particle Physics

Outline the results of the gold leaf experiments

1. Alpha particles fired at gold metal foil
2. In a vacuum
3. Most pass straight through/undeflected;
4. Some deflected;
5. Very few reflected/deflected through large angles;
6. Atom mainly empty space;
7. Most did not get near enough to any matter to be deflected;
8. Only a few particles came close enough to charge to be affected;
9. Nucleus has mass much greater than alpha particle mass to cause deflection;
10. Nucleus contains most of the mass;
11. Nucleus very small/tiny;
12. Nucleus charged/positive;
13. Alpha particles are deflected by a charged nucleus that has a very small diameter compared to that of the atom rather than the charge being distributed throughout the atom;
14. most of the mass of the atom is concentrated in the nucleus rather than distributed throughout the atom;

Explain how the observations from the alpha particle scattering experiment led to a new model of the atom

1. Most alpha particles pass through undeflected OR some deflected through a small angle;
2. A very small number are deflected through an angle greater than 90 degrees;
3. This suggests that the alpha particles are deflected by a charged nucleus that has a very small diameter compared to that of the atom rather than the charge being distributed throughout the atom;
4. and that most of the mass of the atom is concentrated in the nucleus rather than distributed throughout the atom;

Role of E and B fields in particle detector

1. Electric field accelerates particles
2. Direction of deflection/force indicates sign of charge;
3. $a = EQ/m$;
4. Magnetic fields provide a centripetal force*;
5. Direction of force/curvature indicates sign of charge;
6. Momentum from radius;
7. $r = p/BQ$;

Charged Particles in Oncology Marco Durante,Francis A. Cucinotta,Jay S. Loeffler,2018-01-31 High energy charged particles represent a cutting edge technique in radiation oncology Protons and carbon ions are used in several centers all over the world for the treatment of different solid tumors Typical indications are ocular malignancies tumors of the base of the skull hepatocellular carcinomas and various sarcomas The physical characteristics of the charged particles Bragg peak allow sparing of much more normal tissues than it is possible using conventional X rays and for this reason all pediatric tumors are considered eligible for protontherapy Ions heavier than protons also display special radiobiological characteristics which make them effective against radioresistant and hypoxic tumors On the other hand protons and ions with high charge Z and energy HZE particles represent a major risk for human space exploration The main late effect of radiation exposure is cancer induction and at the moment the dose limits for astronauts are based on cancer mortality risk The Mars Science Laboratory

MSL measured the dose on the route to Mars and on the planet's surface suggesting that a human exploration missions will exceed the radiation risk limits. Notwithstanding many studies on carcinogenesis induced by protons and heavy ions the risk uncertainty remains very high. In this research topic we aim at gathering the experiences and opinions of scientists dealing with high energy charged particles either for cancer treatment or for space radiation protection. Clinical results with protons and heavy ions as well as research in medical physics and pre clinical radiobiology are reported. In addition ground based and spaceflight studies on the effects of space radiation are included in this book. Particularly relevant for space studies are the clinical results on normal tissue complications and second cancers. The eBook nicely demonstrates that particle therapy in oncology and protection of astronauts from space radiation share many common topics and can learn from each other.

DeColonize EcoModernism! Ariel Salleh, 2024-12-12 In the 21st century the old colonial attitude of terra nullius meaning a vacant place free for the taking still lurks behind the global economic expropriation of peoples' lands and bodies. Today that theft is rationalised internationally by ecomodernist policy. This book engages with the patriarchal colonial capitalist mindset of the contemporary Androcene and its threats to Life on Earth including global warming and nuclear risks, mining, and the gene trade. The Fourth Industrial Revolution and digital coloniality. Ariel Salleh spells out the social and ecological contradictions set in motion by neocolonialism. Inspired by decolonial thinkers from Arturo Escobar to Tyson Yunkaporta and critics of technology like Vandana Shiva and Shoshana Zuboff, she argues that dispossession of First Nation peoples' livelihoods is not healed by consumerism in the name of development. Breaking with ecomodernist policy such as the tech fix of mainstream environmentalists, Salleh contests the patriarchal colonial capitalist imperium and its advocacy of Green New Deals, Earth Governance, Sustainable Development Goals, and Smart Futures Worldwide. Many decolonial activists see through the zero-sum imagination and its Earth Summits. Youth too is defying the capitalist ruling class extinction trajectory and some even challenge the fashionable post-human ideology circulating in high-tech quarters. Beyond exchange value, these Others of the Androcene are calling for self-governing bioregional futures respectful of indigenous skills; they want local food, sovereign economies which meet people's needs while protecting nature's metabolic value. Spelling out the biopolitical violence of

digitalization and genetic engineering this book traces two decades of creative defiance by global peoples movements against the contradictions of ecomodernist development and its ongoing imposition by nation states and international agencies
