voluntarily adopt privacy components in their service infrastructures Addressing the weaknesses of existing PETs this book introduces a user centric privacy architecture that facilitates a provider independent exchange of privacy related information about service providers This capability is achieved by a privacy community an open information source within the proposed privacy architecture A Wikipedia like Web front end enables collaborative maintenance of service provider information including multiple ratings experiences and data handling practices In addition to the collaborative privacy community the introduced privacy architecture contains three usable PET components on the user side that support users before during and after the disclosure of personal data All introduced components are prototypically implemented and underwent several user tests that guaranteed usability and user acceptance of the final versions The elaborated solutions realize usable interfaces as well as service provider independence Overcoming the main shortcomings of existing PET solutions this work makes a significant contribution towards the broad usage and acceptance of tools that protect personal user data
