

## STOPPING AND PARKING THE MACHINE

Where possible, stop the machine on dry and level ground.

- 1 Ease up on the accelerator pedal and down on the brake pedal to bring the machine to a smooth stop. Keep the foot brakes on until the parking brake has been engaged and the drive disengaged. (Steps 2 and 3).
- 2 Engage the parking brake. Pull the parking brake lever fully up. Make sure that the parking brake indicator lights up. Release the foot brakes.

### **⚠ CAUTION**

The parking brake must not be used to slow the machine from traveling speed, except in an emergency, otherwise the efficiency of the brake will be reduced.

Whenever the parking brake has been used in an emergency, always renew both brake pads.

4-2-1-102

**Notice:** An audible alarm will sound when the parking brake is engaged with the machine in forward or reverse drive. The alarm will stop when the drive is disengaged (see Step 3).

- 3 Set the forward/reverse lever to neutral.
- 4 Retract and lower the boom, rest the forks flat on the ground.
- 5 If you are leaving the machine, make sure that all switches are set to off. Remove the starter key.

It is recommended that turbocharged engines are run at 1000 RPM (approx) and reduced load for 2-3 minutes before shut down. This will allow the turbocharger to cool.

- 6 Use the handholds and steps when you climb down from the machine. If you are leaving the machine, close and latch all windows and lock the door. We also recommend that the fuel filler cap is locked on.

### **⚠ WARNING**

Always face the machine when entering (and leaving) the cab. Make sure your shoes and hands are clean and dry. Otherwise you could slip and fall.

2-2-1-3

- 7 At the end of a working cycle or if the machine is being left unattended, provided the lights are not required remove the battery isolator key, see **Battery** (MAINTENANCE section).
