Using MATLAB to Analyze and Design Control Systems Naomi Ehrlich Leonard, W. S. Levine, 1995 Symbolic dynamics is a rapidly growing area of dynamical systems Although it originated as a method to study general dynamical systems it has found significant uses in coding for data storage and transmission as well as in linear algebra This book is the first general textbook on symbolic dynamics and its applications to coding Mathematical prerequisites are relatively modest mainly linear algebra at the undergraduate level especially for the first half of the book Topics are carefully developed and motivated with many examples and there are over 500 exercises to test the reader's understanding The last chapter contains a survey of more advanced topics and a comprehensive

bibliography is included This book will serve as an introduction to symbolic dynamics for advanced undergraduate students in mathematics engineering and computer science

Modern Control Systems Engineering Zoran Gajic,Zoran Gajić,M. Lelić,1996 The book represents a modern treatment of classical control theory and application concepts Theoretically it is based on the state space approach where the main concepts have been derived using only the knowledge from a first course in linear algebra Practically it is based on the MATLAB package for computer aided control system design so that the presentation of the design techniques is simplified The inclusion of MATLAB allows deeper insights into the dynamical behaviour of real physical control systems which are quite often of high dimensions Continuous time and discrete time control systems are treated simultaneously with a slight emphasis on the continuous time systems especially in the area of controller design Instructor's Manual 0 13 264730 3
