Environmental Problems Projects Rubric

Robert Mayes, James Myers

Environmental Problems Projects Rubric:

Finance Policy for Renewable Energy and a Sustainable Environment Michael Curley, 2014-03-18 This book explains how environmental projects and improvements are achieved through the imposition of regulations on the one hand and financial incentives on the other. It discusses how those incentives can be organized to achieve the greatest environmental benefits at the lowest possible cost to the public. It presents the best environmental finance policies for the financing of alternative energy projects so that the ultimate cost of delivered power will decline. It also examines the challenges of the next generation of environmental programs. *Environmental Change and Security Project Report*, 1998

Quantitative Reasoning in the Context of Energy and Environment Robert Mayes, James Myers, 2015-01-19 This book provides professional development leaders and teachers with a framework for integrating authentic real world performance tasks into science, technology, engineering, and mathematics (STEM) classrooms. We incorporate elements of problem-based learning to engage students around grand challenges in energy and environment, place-based learning to motivate students by relating the problem to their community, and Understanding by Design to ensure that understanding key concepts in STEM is the outcome. Our framework has as a basic tenet interdisciplinary STEM approaches to studying real world problems. We invited professional learning communities of science and mathematics teachers to bring multiple lenses to the study of these problems, including the sciences of biology, chemistry, earth systems, and physics; technology through data collection tools and computational science modeling approaches; engineering design around how to collect data and mathematics through quantitative reasoning. Our goal was to have teachers create opportunities for their students to engage in real world problems impacting their place, problems that could be related to STEM grand challenges, demonstrating the importance and utility of STEM. We want to broaden the participation of students in STEM, which both increases the future STEM workforce, providing our next generation of scientists, technologists, engineers, and mathematicians, as well as producing a STEM literate citizenry that can make informed decisions about grand challenges that will be facing their generation. While we provide a specific example of an interdisciplinary STEM module, we hope to do more than provide a single fish. Rather, we hope to teach you how to fish so you can create modules that will excite your students. **A Problem-based Approach for Management Education**

Philip Hallinger, Edwin M. Bridges, 2007-05-22 A Problem-based Approach for Management Education describes the use of problem-based learning (PBL) in management education. PBL is an active learning approach first pioneered in medical education but whose use has grown steadily in a variety of professional fields over the past two decades. The authors draw upon their experience in using PBL in a broad array of management education programs at the Bachelor, Master, Doctoral, and Executive levels in North America and in Asia. This book is designed to provide both novice and experienced users of PBL with resources for designing and implementing problem-based management education. The book provides the novice with useful theoretical and practical background on how to design a PBL curriculum, use PBL in a classroom, and develop

PBL materials At the same time the book will challenge experienced users of PBL and case teaching to extend their applications through the use of learning technologies and more systematic approaches to assessment and curriculum design
