Inventory of Federal Energy-related Environment and Safety Research for ... ,1980 Advances in Marine and Freshwater Monitoring to support Aquatic Ecosystem Conservation and Restoration Elisabetta Manea,Caterina Bergami,Robert Ptacnik,2023-11-13 Conserving and restoring freshwater and marine ecosystems are priorities addressed by several European and global conservation initiatives Many management and conservation initiatives have been put in place to support the achievement of declared national and global conservation and sustainability goals Nonetheless the extent to which all these initiatives can provide lasting positive effects on conservation and restoration targets is often impaired limited by the lack of robust baseline data and systematic monitoring which in turn are constrained by the limited number of long term monitoring programs and limited dedicated funding This collection underlines the importance of monitoring in times of global change and shifting baselines and the urgency of boosting conservation strategies to ensure progression towards meeting global conservation objectives Emphasis is given also to the socio ecological contexts and dimensions of conservation efforts and the potential of societal engagement in monitoring practices a key enabling factor to turn conservation initiatives into practical actions and ecosystem protection

Inventory of Federal Energy-related Environment and Safety Research for FY 1978 ,1979 Inventory of Federal Energy-related Environment and Safety Research for FY 1978: Project listings and indexes ,1979 **Wetlands and Water Resources: Ecological Solutions for the Environment** Guangzhi Sun,Xiaofei Yu,Yuanchun Zou,Guobin Fu,2023-04-12 Wetlands are usually located in complex

landscapes Multiple ecosystem services delivered by wetlands to human well being should be considered in broader contexts of wetland functions water quality water resource management and wetland conservation Natural wetlands are kidneys and sponges of the earth that remove water pollutants and provide hydrological regulation functions vital to the environment Where the functions of the wetlands are weakened actions of rehabilitations are needed to revitalize those functions While worldwide many natural wetlands have disappeared due to climate change and or human activities constructed wetlands which may be seen as artificial kidneys sponges of the earth have been increasingly built to replicate the functions of the natural wetlands This Research Topic aims to collect and present the latest research developments in natural and constructed wetlands in relation to either water resource functions or water quality Articles published in this Research Topic will showcase new understandings of water balances and flow patterns vegetation characteristics and pollutant transformations in wetland systems innovative designs and efficiencies of wastewater treatment wetlands and technologies that revitalize the ecosystem functions of natural wetlands These articles are expected to bring benefits to research communities water and wastewater industries and government agencies that deal with wetland water management and conservation High quality Original Research and Review articles in this field are all welcome for submission to this Research Topic Research interests include but are not limited to the following areas 1 Water balances and flow patterns in natural wetland systems 2 The hydrological regulation functions and importance of natural wetlands in their environmental context 3 Vegetation characteristics of natural wetlands and their functional importance in wetland water pollution control 4 Techniques for the rehabilitation of degraded wetlands 5 The role of constructed wetlands in wastewater treatment 6 Innovative designs and efficiencies of wastewater treatment wetlands 7 The modeling of hydrological and or pollutant dynamics in wetland systems 8 The ecohydrology of wetlands 9 The role of wetlands in the global carbon cycle 10 Impacts of climate change and human activities on wetland hydrology and water resources Recognizing that hydrological and biogeochemical processes are basically coupled in wetlands and their landscapes manuscripts that report their interactions are particularly welcome

Nuclear Science Abstracts ,1975 *Particulate Plastics in Terrestrial and Aquatic Environments* Nanthi S. Bolan,M.B. Kirkham,Claudia Halsband,Dayanthi Nugegoda,Yong Sik Ok,2020-07-30 The manufacture of plastic as well as its indiscriminate disposal and destruction by incineration pollutes atmospheric terrestrial and aquatic ecosystems Synthetic plastics do not break down they accumulate in the environment as macro micro and nanoplastics These particulate plastics are a major source of pollutants in soil and marine ecosystems *Particulate Plastics in Terrestrial and Aquatic Environments* provides a fundamental understanding of the sources of these plastics and the threats they pose to the environment The book demonstrates the ecotoxicity of particulate plastics using case studies and offers management practices to mitigate particulate plastic contamination in the environment Features Describes physical and chemical properties of particulate plastics in terrestrial and aquatic ecosystems Presents information on characteristics of

particulate plastics as impacted by weathering processes Provides numerous approaches for managing particulate plastic contamination Identifies sources of particulate plastics in the environment distribution and characteristics of particulate plastics and management strategies of particulate plastics Written by a global team of scientists this book is for researchers in the fields of environmental safety and waste management or individuals interested in the impact of particulate plastics on environmental health **Undergraduate Catalog** University of Michigan--Dearborn,2006 *Implementing Environmental Flows: Lessons for Policy and Practice* David Tickner,Nitin Kaushal,Robert Alexander Speed,Rebecca Elizabeth Tharme,2020-10-08 This eBook is a collection of articles from a Frontiers Research Topic Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series they are collections of at least ten articles all centered on a particular subject With their unique mix of varied contributions from Original Research to Review Articles Frontiers Research Topics unify the most influential researchers the latest key findings and historical advances in a hot research area Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office frontiersin.org about contact Ecosystem Services, Biodiversity and Water Quality in Transitional Ecosystems Michele Mistri,Alice Newton,Angel Pérez-Ruzafa,Sofia Reizopoulou,2023-04-03 **Respiration in Aquatic Ecosystems** Paul del Giorgio,Peter Williams,2005-01-06 Respiration represents the major area of ignorance in our understanding of the global carbon cycle In spite of its obvious ecological and biogeochemical importance most oceanographic and limnological textbooks invariably deal with respiration only superficially and as an extension of production and other processes The objective of this book is to fill this gap and to provide the first comprehensive review of respiration in the major aquatic systems of the biosphere The introductory chapters review the general importance of respiration in aquatic systems and deal with respiration within four key biological components of aquatic systems bacteria algae heterotrophic protists and zooplankton The aim of this first part is to provide the backbone for the analysis and interpretation of ecosystem level respiration in a variety of aquatic environments The central chapters of the book review respiration in major aquatic ecosystems including freshwater wetlands lakes and rivers estuaries coastal and open ocean and pelagic ecosystems as well as respiration in suboxic environments For each major ecosystem the corresponding chapter provides a synthesis of methods used to assess respiration outlines the existing information and data on respiration discusses its regulation and link to biotic and abiotic factors and finally provides regional and global estimates of the magnitude of respiration The final chapter provides a general synthesis of the information and data provided in the different sections and further attempts to place aquatic respiration within the context of the global carbon budget **Nature-Based Solutions for Urban Water Management** Junguo Liu,Zhan Tian,Qinhua Ye,Laixiang Sun,Shiqiang Wu,2024-02-23 Water plays an essential role in the development and functioning of a city but could also be a key risk factor for urban pluvial flooding which may occur more frequently in the context of future climate change The traditional means of flood risk management relied heavily on engineering measures or

the use of gray infrastructure Recently there has been a call to integrate nature based solutions NBS which make use of natural processes and ecosystem services with conventional engineering approaches NBS infrastructures and designs pay great attention to ecosystem services considerations in assessing their induced hydrological processes as well as in managing the stormwater and mitigating urban flood and droughts Nevertheless compared with grey infrastructure larger space could be demanded for NBS while the buffer effect for NBS in extremes events is still uncertain for evaluation Environmental Science: Systems and Solutions Michael L.
