The It Factor: What Makes a Teacher Great? Holly J.

Thornton,2018-05-16 The impact a teacher has on students may be profound and lasting Thus teacher preparation is grounded in standards to assure that all teacher candidates know the content and have the skills needed to become good teachers What makes a teacher great The answer is not clear cut or easily measured with tests But we all know a great teacher when we see one The best teachers have an It Factor that sets them apart from others It is seemingly intangible and unteachable as it s often said that Some people are just born to be teachers This book challenges that assumption and uncovers the It Factor Teacher and student voices helped to develop language and tools to examine how teachers are disposed to think and act and how this affects student learning If we can identify what makes teachers great we can teach it Students have a sea of information opinions and messaging at their fingertips They find themselves navigating through a myriad of facts and alternative facts Opinions beliefs and fallacies share the same platform and status as well grounded information and vetted ideas fueling tensions among individuals and distance between groups Developing students who are caring critical thinkers and problem solvers may be more important now than ever The teachers who are right for this challenge have more than content knowledge and teaching skills To meet this challenge teachers need to have It that something inside that makes them not just good teachers but great ones Mentoring Students of Color ,2019-07-01 As more students of color continue to make up our nation s schools finding ways to address their academic and cultural ways knowing become important issues This book explores these intersections by covering a variety of topics related to race social class and gender all within a multiyear study of a mentoring program that is situated within U S K 12 schools Furthermore the role of power is central to the analyses as the contributors examine questions tensions and posit overall critical takes on mentoring Finally suggestions for designing critical and holistic programming are provided Contributors are Shanyce L Campbell Juan F Carrillo Tim Conder Dana Griffin Alison LaGarry George Noblit Danielle Parker Moore Esmeralda Rodriguez and Amy Senta **The End of Desegregation?** Stephen J. Caldas,Carl Leon Bankston,2003 After over half a century of court directed efforts to redress the historical educational chasm between blacks and whites in the United States both the past achievements and the future direction of school desegregation are uncertain Too often the early gains made in racially desegregating America s schools seem to have been halted and in many cases reversed Urban school decay is once again on the rise with predictable consequences For the very poorest minority students who have limited educational options apart from dangerous deteriorating neighbourhood schools drop out rates are high standardised test scores are abysmally low and violence is an everyday fact of life The gulf between the unskilled marginalised students being warehoused in these predominantly poor minority schools on the one hand and the increasingly high tech society they cannot compete in on the other is growing This ground breaking book presents the viewpoints and research of some of the most prominent scholars in

the field of school desegregation It covers virtually the entire spectrum of thinking and scholarship on school desegregation and its promise success necessity pitfalls and failures **Environmental Health Perspectives** ,2007-08 *Classroom Assessment* Peter W. Airasian,2001 Airasian presents complex concepts clearly so that pre service teachers can understand them and solidly grounds these concepts in best practice through practical real well integrated examples He talks to not at users The text conceives of classroom assessment in a broader way than many other texts It focuses not only on the assessment needs of testing grading interpreting standardized tests and performance assessments but also on assessment concerns in organizing a classroom at the start of school planning and implementing instruction and strategies of teacher self reflection It views classroom assessment as an everyday ongoing integral part of teaching not something that is separated from life in classrooms The text is organized in a manner that follows the natural progression of teacher decision making from organizing the class as a learning community to planning and conducting instruction to the formal evaluation of learning and finally to grading **Assessment in the Classroom** Peter W. Airasian,1996 The special mission of *Assessment in the Classroom* is to show how assessment principles apply to the full range of teacher decision making from organizing the class as a social system to planning and conducting instructions to the formal evaluation of learning and finally to grading The goal is to show students that assessment is an everyday ongoing part of their teaching not some esoteric affair that is divorced from their daily routine With this in mind the following features have been built into this text *Resources in Education* ,1988 *The Journal of Education* ,1893 **Georgia Grade 8 Social Studies EOG** American Book Company,2019-12-17 [Monitoring in Neurocritical Care E-Book](#) Peter D. Mullen, Peter Hall, 2016-02-05 There is overwhelming evidence linking increased physical activity with positive changes in cognitive functioning and brain health Much of what we know about these interrelationships comes from aerobic exercise training studies with older adults and children This literature has paved the way for the neuroscientific investigation of mechanisms responsible for exercise induced cognitive and brain health enhancement a list that ranges from molecular changes to systemic changes in executive control and neural connectivity A new perspective has also emerged that aims to understand executive control processes that may underlie the regulation of health behavior In accordance with this view physical activity falls under the umbrella of health behaviors that require a substantial amount of executive control Executive control is a limited resource and the aging process depletes this resource People who regularly exercise are said to have higher self regulatory control planning goal shielding and impulse control than irregular exercisers The successful maintenance of physical activity participation in lieu of daily cognitive stressors likely reflects an adaptive resistance to control failures Indeed a handful of studies have shown the relationship between greater executive control and subsequently higher levels of physical activity However little is known about the neural correlates of physical activity adherence or sedentary behavior with the view that neurocognitive factors have an antecedent and reciprocal influence on these behaviors No research has focused on the brain networks responsible for the self regulation of physical activity which likely overlaps with structures and functions playing critical roles in the regulation of other health behaviors Interdisciplinary investigations are needed to explain the extent to which physical activity self regulation and self regulatory failure is dependent upon or under the influence of executive control processes and brain networks Understanding the degree to which self regulatory resources may be enhanced restored and trained will have enormous implications for basic science and applied fields It is also of great import to understand whether or not physical activity self regulation is a domain specific behavior associated with specific brain networks or to determine the extent to which regulatory network sharing occurs The aim of this Frontiers Research Topic is to curate contributions from researchers in social and cognitive neurosciences and related fields whose work involves the study of physical activity behavior self regulation and executive control For this Research Topic we therefore solicit reviews original research articles and opinion papers which draw theoretical or empirical connections related to sustained physical activity behavior self regulatory strategies cognitive performance and brain structure and function While focusing on work in the neurosciences this Research Topic also welcomes contributions in the form of behavioral studies psychophysiological investigations and methodological innovations This Frontiers Research Topic will carve out new directions for the fields of exercise cognitive and social neurosciences We hope you will consider submitting your work Monthly Index of Russian Accessions Library of Congress.
