Living Earth R.E. Nisbet,2013-12-01 Life has shaped the Earth and the Earth has moulded the history of life That history the co evolution of our ancestors and their home has much to teach us about our place on the planet today We are part of the fabric of the biosphere As we change that fabric we would be wise to understand how our home was built Our planet is neither a hotel nor a colony It is not a place which life briefly inhabits during a transient occupation Instead it is our home designed by the deeds of our ancestors and suited to our own needs The history of life on Earth is held in the geological record which is composed of the rocks water and air that are available for study on the planet's surface These rocks the oceans and the atmosphere are not simply stores of information for the excitement of fossil hunters and geochemists or resources to exploit without thought Their creation and continued existence form an integral part of the development and management of the Earth as the home of life

Science Fiction Literature through History Gary Westfahl,2021-07-19 This book provides students and other interested readers with a

Proxies in Late Cenozoic Paleoceanography C. Hillaire-Marcel, Anne de Vernal, 2007-05-25 The present volume is the first in a series of two books dedicated to the paleoceanography of the Late Cenozoic ocean The need for an updated synthesis on paleoceanographic science is urgent owing to the huge and very diversified progress made in this domain during the last decade In addition no comprehensive monography still exists in this domain This is quite incomprehensible in view of the contribution of paleoceanographic research to our present understanding of the dynamics of the climate ocean system The focus on the Late Cenozoic ocean responds to two constraints Firstly most quantitative methods notably those based on micropaleontological approaches cannot be used back in time beyond a few million years at most Secondly the last few million years with their strong climate oscillations show specific high frequency changes of the ocean with a relatively reduced influence of tectonics The first volume addresses quantitative methodologies to reconstruct the dynamics of the ocean and the second major aspects of the ocean system thermohaline circulation carbon cycle productivity sea level etc and will also present regional synthesis about the paleoceanography of major oceanic basins In both cases the focus is the open ocean leaving aside nearshore processes that depend too much on local conditions In this first volume we have gathered up to date methodologies for the measurement and quantitative interpretation of tracers and proxies in deep sea sediments that allow reconstruction of a few key past properties of the ocean temperature salinity sea ice cover seasonal gradients pH ventilation oceanic currents thermohaline circulation and paleoproductivity Chapters encompass physical methods conventional grain size studies tomodesitometry magnetic and mineralogical properties most current biological proxies planktic and benthic foraminifers deep sea corals diatoms coccoliths dinocysts and biomarkers and key geochemical tracers trace elements stable isotopes radiogenic isotopes and U series Contributors to the book and members of the review panel are among the best scientists in their specialty They represent major European and North American laboratories and thus provide a priori guarantees to the quality and update of the entire book Scientists and graduate students in paleoclimatology paleoceanography climate modeling and undergraduate and graduate students in marine geology represent the target audience This volume should be of interest for scientists involved in several international programs such as those linked to the IPCC IODP Integrated Ocean Drilling Program PAGES Past Global Changes IMAGES Marine Global Changes PMIP Paleoclimate Intercomparison Project several IGCP projects etc That is all programs that require access to time series illustrating changes in the climate ocean system Presents updated techniques and methods in paleoceanography Reviews the state of the art interpretation of proxies

used for quantitative reconstruction of the climate ocean system Acts as a supplement for undergraduate and graduate courses in paleoceanography and marine geology **Eco-Sonic Media** Jacob Smith, 2015-06-05 The negative environmental effects of media culture are not often acknowledged the fuel required to keep huge server farms in operation landfills full of high tech junk and the extraction of rare minerals for devices reliant on them are just some of the hidden costs of the contemporary mediascape Eco Sonic Media brings an ecological critique to the history of sound media technologies in order to amplify the environmental undertones in sound studies and turn up the audio in discussions of greening the media By looking at early and neglected forms of sound technology Jacob Smith seeks to create a revisionist ecologically aware history of sound media Delving into the history of pre electronic media like hand cranked gramophones comparatively eco friendly media artifacts such as the shellac discs that preceded the use of petroleum based vinyl early forms of portable technology like divining rods and even the use of songbirds as domestic music machines Smith builds a scaffolding of historical case studies to demonstrate how green media archaeology can make sound studies vibrate at an ecological frequency while opening the ears of eco criticism Throughout this eye opening and timely book he makes readers more aware of the costs and consequences of their personal media consumption by prompting comparisons with non digital non electronic technologies and by offering different ways in which sound media can become eco sonic media In the process he forges interdisciplinary connections opens new avenues of research and poses fresh theoretical questions for scholars and students of media sound studies and contemporary environmental history
