

Hormones Chemical substances that act as messengers and control metabolic functions in many cells in the body.

- They can T.L. the rate of cellular functions.
- Are classified as **steroid** or **protein** hormones.
- Steroid hormones, passing through membranes, act on the nucleus to produce protein or enzyme synthesis in the cell.
- Act on the cytoplasmic receptors.
- Protein hormones, acting on the cell membrane, activate secondary messengers.
- Steroid hormones: androgens, estrogens, glucocorticoids, mineralocorticoids.

Water vs. Lipid Soluble Hormones

Water-soluble hormones bind to a receptor on the plasma membrane, activate a second-messenger system, & produce an obligatory metabolic that respond to chemicals and act as a switch to activate a cellular response.

ENDOCRINE SYSTEM

Endocrinology the scientific study of hormones and endocrine glands.

Functions

1. Growth and development
2. Metabolic rate, anabolic and catabolic
3. Regulation of reproduction and energy balance
4. Homeostasis

How it works

The endocrine system works with the hypothalamus, pituitary, and thyroid glands to regulate cellular functions in the body and hormones.

- **Endocrine glands** release hormones into the bloodstream to regulate metabolic activities throughout the body.
- Each hormone has a specific function in the body and has its own specific target cells for which the hormone is the substrate by the mechanism.

- 1. Each hormone specifically binds to a **target cell**.
- 2. A target cell has receptors on their cell membrane designed to respond to that specific hormone.
- 3. When the hormone binds to the receptor, the receptor acts as a "lock and key" mechanism.
- 4. After the hormone binds to the cell receptor, a chemical chain of events occurs, leading to a hormonal response.

Effectors are target organs or glands that respond to hormones, producing a response.

ENDOCRINE VS. EXOCRINE GLANDS

Endocrine glands secrete hormones directly into the bloodstream. Examples include the hypothalamus, pituitary, thyroid, parathyroid, adrenal, pancreas, and gonads.

Exocrine glands secrete substances through ducts. Examples include sweat glands, salivary glands, and the pancreas (which also has an endocrine function).

REPRODUCTIVE SYSTEM

Reproductive system is a series of organs that work together to allow the transmission of genetic material to the next generation.

REPRODUCTIVE SYSTEM

The **reproductive system** is responsible for the production of gametes.

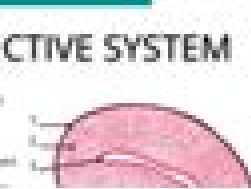

1. **Primary** (gonads)
2. **Secondary** (accessory)
3. **Accessory** (ducts)

Primary genitalia are the gonads.

1. Ovary (female)
2. Testis (male)
3. Epididymis
4. Vas deferens
5. Uterus/vagina

The **secondary genitalia** are the accessory organs.

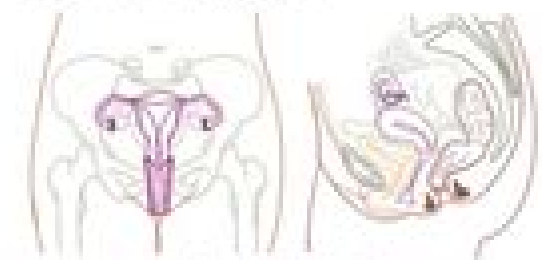

1. Vagina
2. Uterus
3. Fallopian tube
4. Cervix
5. Vaginal opening

REPRODUCTIVE SYSTEM

The **reproductive system** functions to produce offspring. Primary sex organs called **gonads** (ovary & testis) produce **gametes** (ova & sperm) and secrete hormones. Accessory organs include ducts, glands, and external genitalia.

Two categories include the **male** reproductive system which produces **sperm**, and the **female** reproductive system which produces **eggs** (ova).

Female Reproductive System

Male System

Male produces sperm. Sperm travels through the duct system into the urethra, where it meets the egg. The egg is released from the ovary.

Female System

Female produces eggs. Eggs travel through the duct system into the uterus, where they meet the sperm. The sperm is released from the testis.

A Practical Guide to Toxicology and Human Health Risk Assessment Laura Robinson, 2018-11-05

Toxicology, the study of the adverse effects of chemicals on living organisms, is the cornerstone to all aspects of chemical safety and knowledge of the subject is needed in a wide spectrum of fields from the chemical industry to medicine, emergency services, forensics, and regulatory science. Toxicology involves the study of symptoms, mechanisms, treatments, and detection of poisoning, especially the poisoning of people. The many problems arising from a poor understanding of toxicology and its applications in hazard communication and chemical safety motivated the author's training courses and webinars leading to this valuable book. Providing a practical and accessible guide, *A Practical Guide to Toxicology and Human Health Risk Assessment* enables readers to quickly build up knowledge and understanding of toxicology and its use in hazard identification, which is a fundamental part of chemical risk assessment. The book also covers current toxicological testing strategies and the use of physicochemical test data in hazard identification and exposure assessment. Examples are provided throughout the book to highlight important issues along with a summary of the key points that have been covered in each of the respective chapters. The book concludes with a listing of online resources on toxicology and risk assessment.
