The Eastern Mediterranean as a Laboratory Basin for the Assessment of Contrasting Ecosystems P.M.

Malanotte-Rizzoli, Valery N. Eremeev, 2012-12-06 This book is the outcome of a NATO Advanced Research Workshop on The Eastern Mediterranean as a laboratory basin for the assessment of contrasting ecosystems that was held in Kiev Ukraine March 23 27 1998 The scientific rationale of the workshop can be summarized as follows The Eastern Mediterranean is the most nutrient impoverished and oligotrophic large water body known There is a well defined eastward trend in nutrient ratios over the entire Mediterranean that starts at the Gibraltar Straits and through the western basin proceeds to the Ionian and Levantine Seas Supply of nutrients to the entire Mediterranean is limited by inputs from the North Atlantic and various river systems along the sea The unique feature of the Mediterranean is the presence of an eastward longitudinal trend in available nitrate phosphate ratios This apparently induces a west to east variation in the structure of the pelagic food web and trophic interactions In this context the Mediterranean and in particular its Eastern basin provides probably a unique platform to explore the hypotheses related to the suggested phosphate limitation on production and to the shift between microbial and classical modes of operation of the photic food web The major exception of the overall oligotrophic nature of the Eastern Mediterranean is the highly eutrophic system of the Northern Adriatic Sea Here during the last two decades the discharges of the northern rivers especially of the Po together with municipal sewage have led to a very marked increase of nutrients and subsequent imponent eutrophication events

Science Strategies to Increase Student Learning and Motivation in Biology and Life Science Grades 7 Through 12 David Butler, 2022-02-17 On the first day of school have you ever thought of your classrooms as newly opened boxes of crayons I do Like pencil sticks of colored wax the students

each have different names individual characteristics and various levels of brightness I set a goal each year to promote not only creativity but to draw out of my students reasons about why science is so important As science educators we not only need to illustrate the importance of knowing facts and terminology but also be able to frame those concepts in such a way that students are motivated to want to study and understand biology When I began teaching I never thought that I would have the multitude of experiences I have now I have taught in schools ranging from city to rural public to private and large to small not to mention classes ranging from general science to advanced biology Through these diverse experiences I have developed a number of strategies that have enhanced student achievement and science appreciation In this book I will share with you these experiences and techniques showing you how to enhance teaching skills increase student drive create mental connections better manage your class time use proper technology practice forms of differentiation and incorporate the NGSS In addition this text allows me to share my most treasured philosophies experiences and teaching strategies and how they can be applied to biology life science classrooms
