

# A Guide to Operating and Maintaining Your Single-Packaged Electric Heat Pump Units

**NOTE:** Read the entire instruction manual before starting the installation.

## SAFETY CONSIDERATIONS

**Note to Installer:** This manual should be left with the equipment user.

### ⚠ WARNING

Do not store or use gasoline or other flammable vapors and liquids in the vicinity of these or any other appliances. Failure to follow this warning could result in fire, serious injury, or death.

### ⚠ WARNING

Do not use this unit if any part has been under water. Immediately call a qualified service technician to inspect the unit and to replace any part of the control system which has been under water. Failure to follow this warning could result in electrical shock, fire, serious injury, or death.

### ⚠ WARNING

Before performing recommended maintenance, be sure the main power switch to unit is turned off and lock-out tag installed. Electric shock could cause serious injury or death.

## STARTING OR SHUTTING UNITS OFF

### 1. To start this unit:

- Turn on the electrical power supply to unit.
- Select temperature and set SYSTEM switch or MODE control to desired mode.

### 2. To shut this unit off:

**NOTE:** If the unit is being shut down because of a malfunction, call your dealer as soon as possible.

- Set system SWITCH or MODE control to OFF.
- Turn off the electrical power supply to unit and install lock-out tag.

## OPERATING YOUR HEAT PUMP

The operation of your heat pump system is controlled by the indoor thermostat. You simply adjust the thermostat and it maintains the indoor temperature at the level you select. Most thermostats of heat pump systems have 3 controls: a temperature control selector, a FAN control, and a SYSTEM or MODE control. Refer to your thermostat owner's manual for more information.

To better protect your investment and to eliminate unnecessary service calls, familiarize yourself with the following facts:

- During heating, increasing the thermostat setting more than 2°F/1.1°C may cause the supplemental heaters to be turned on for a short period of time to satisfy the thermostat. Needless use of the supplementary heat reduces potential energy savings.

- Ice or frost tends to form on the coil during winter heating operation. Your heat pump is designed to automatically melt the ice. When in this defrost cycle, it is normal for steam or fog to rise from the outdoor unit. Do not be alarmed!

**Fig. 1—Unit 50JS (50Hz)**

### Step 1—Cooling Mode

With the SYSTEM or MODE control set to COOL, your heat pump will run in cooling mode until the indoor temperature is lowered to the level you have selected. On extremely hot days, your heat pump will run for longer periods at a time and have shorter "off" periods than on moderate days.

### Step 2—Heating Mode

With the SYSTEM or MODE control of your indoor thermostat set to HEAT, your heat pump will run in heating mode until room temperature is raised to the level you have selected. Of course, your heat pump will run for longer periods to maintain a comfortable environment on cooler days and nights than on moderate ones.

### Step 3—Supplemental Heat

Your heat pump is your primary heating source. Your system may also be equipped with a supplemental heating source such as electric heat. On cold days and nights, your system will automatically turn on the supplemental heat in order to maintain the level of comfort you have selected.

When your heat pump needs additional heat to keep you comfortable, your Carrier electronic thermostat will turn on the supplemental heat (if equipped) and display the "AUX HT" message.
