Introduction to Communication Studies John Fiske, 2002-09-11 The second edition of this widely used introductory textbook updates the work to take accounts of developments in the last few years. The reader will be able to tease out the latent cultural meanings in such apparently simple communications as news photos or popular TV programmes.

Environmental Science , Ecology in Action Fred D. Singer, 2016-03-10 Taking a fresh approach to integrating key concepts and research processes this undergraduate textbook encourages students to develop an understanding of how ecologists raise and answer real world questions. Four unique chapters describe the development and evolution of different research programs in each of ecology's core areas showing students that research is undertaken by real people who are profoundly influenced by their social and political environments. Beginning with a case study to capture student interest each chapter emphasizes the linkage between observations, ideas, questions, hypotheses, predictions, results and conclusions. Discussion questions integrated within the text encourage active participation and a range of end of chapter questions reinforce knowledge and encourage application of analytical and critical thinking skills to real ecological questions. Students are asked to analyze and interpret real data with support from online tutorials demonstrating the R programming language for statistical analysis.
