Chapter 1 (Introduction)

Exercise 1.1

Since $f(\cdot)$ is convex we have that

$$f(\lambda x + (1 - \lambda)y) \leq \lambda f(x) + (1 - \lambda)f(y) . \quad (1)$$

Since $f(\cdot)$ is concave we also have that

$$f(\lambda x + (1 - \lambda)y) \geq \lambda f(x) + (1 - \lambda)f(y) . \quad (2)$$

Combining these two expressions we have that f must satisfy each with equality or

$$f(\lambda x + (1 - \lambda)y) = \lambda f(x) + (1 - \lambda)f(y) . \quad (3)$$

This implies that f must be linear and the expression given in the book holds.

Introduction To Linear Optimization Bertsimas Solution Manual:

Modeling and Optimization of Interdependent Energy Infrastructures Wei Wei, Jianhui Wang, 2019-10-22 This book opens up new ways to develop mathematical models and optimization methods for interdependent energy infrastructures ranging from the electricity network natural gas network district heating network and electrified transportation network The authors provide methods to help analyze design and operate the integrated energy system more efficiently and reliably and constitute a foundational basis for decision support tools for the next generation energy network Chapters present new operation models of the coupled energy infrastructure and the application of new methodologies including convex optimization robust optimization and equilibrium constrained optimization Four appendices provide students and researchers with helpful tutorials on advanced optimization methods Basics of Linear and Conic Programs Formulation Tricks in Integer Programming Basics of Robust Optimization Equilibrium Problems This book provides theoretical foundation and technical applications for energy system integration and the interdisciplinary research presented will be useful to readers in many fields including electrical engineering civil engineering and industrial engineering

Optimization in Engineering Ramteen Sioshansi, Antonio J. Conejo, 2017-06-24 This textbook covers the fundamentals of optimization including linear mixed integer linear nonlinear and dynamic optimization techniques with a clear engineering focus It carefully describes classical optimization models and algorithms using an engineering problem solving perspective and emphasizes modeling issues using many real world examples related to a variety of application areas Providing an appropriate blend of practical applications and optimization theory makes the text useful to both practitioners and students and gives the reader a good sense of the power of optimization and the potential difficulties in applying optimization to modeling real world systems The book is intended for undergraduate and graduate level teaching in industrial engineering and other engineering specialties It is also of use to industry practitioners due to the inclusion of real world applications opening the door to advanced courses on both modeling and algorithm development within the industrial engineering and operations research fields

Principles and Practice of Constraint Programming - CP'99 Joxan Jaffar, 2004-06-02 This book constitutes the refereed proceedings of the 5th International Conference on Principles and Practice of Constraint Programming CP 99 held in Alexandria Virginia USA in October 1999 The 30 revised full papers presented together with three invited papers and eight posters were carefully reviewed and selected for inclusion in the book from a total of 97 papers submitted All current aspects of constraint programming and applications in various areas are addressed

Defense Transportation: Algorithms, Models and Applications for the 21st Century Robert T. Brigantic, Jean Mahan, 2004-07-22 Defense Transportation Algorithms Models and Applications for the 21st Century contains papers divided into three general sections according to the title of this text algorithms models and applications The first section on algorithms contains papers that are theoretical in nature or contain new techniques that relate to Defense Transportation System DTS processes A sampling of the papers contained in this

section deals with group theoretic tabu search techniques shortest path sailing distance algorithms and strategic airlift model validation methods The second section contains papers on various transportation models used throughout the DoD and transportation industry as well as some newly developed transportation modelling methods that may eventually find their way into larger scale transportation models A review of the major strategic mobility models is also contained in this section The third section contains papers on various transportation applications that have been used to support various DTS studies and analyses This section also contains a diverse set of topics with articles ranging from a paper on North Atlantic Treaty Organization NATO strategic lift requirements to an analysis paper on theater reception staging onward movement and integration Preface by General John W Handy Commander United States Transportation Command Focus on land sea and air transportation models and methods Manuscripts written by analysts and researchers active in the field and directly supporting the United States Defense Transportation System Research methods were instrumental in defining the in place DTS that so efficiently deployed forces for Operation Enduring Freedom and Operation Iraqi Freedom

Evolutionary Multi-Criterion Optimization Robin Purshouse, Peter Fleming, Carlos M. Fonseca, Salvatore Greco, Jane Shaw, 2013-03-12 This book constitutes the refereed proceedings of the 7th International Conference on Evolutionary Multi Criterion Optimization EMO 2013 held in Sheffield UK in March 2013 The 57 revised full papers presented were carefully reviewed and selected from 98 submissions The papers are grouped in topical sections on plenary talks new horizons indicator based methods aspects of algorithm design pareto based methods hybrid MCDA decomposition based methods classical MCDA exploratory problem analysis product and process applications aerospace and automotive applications further real world applications and under explored challenges

Robust Optimization in Electric Energy Systems Xu Andy Sun, Antonio J. Conejo, 2021-11-08 This book covers robust optimization theory and applications in the electricity sector The advantage of robust optimization with respect to other methodologies for decision making under uncertainty are first discussed Then the robust optimization theory is covered in a friendly and tutorial manner Finally a number of insightful short and long term applications pertaining to the electricity sector are considered Specifically the book includes robust set characterization robust optimization adaptive robust optimization hybrid robust stochastic optimization applications to short and medium term operations problems in the electricity sector and applications to long term investment problems in the electricity sector Each chapter contains end of chapter problems making it suitable for use as a text The purpose of the book is to provide a self contained overview of robust optimization techniques for decision making under uncertainty in the electricity sector The targeted audience includes industrial and power engineering students and practitioners in energy fields The young field of robust optimization is reaching maturity in many respects It is also useful for practitioners as it provides a number of electricity industry applications described up to working algorithms in JuliaOpt
