Standards-based School Mathematics Curricula Sharon L. Senk, Denise R. Thompson, 2020-07-24 The Curriculum and Evaluation Standards for School Mathematics published by the National Council of Teachers of Mathematics in 1989 set forth a broad vision of mathematical content and pedagogy for grades K 12 in the United States These Standards prompted the development of Standards based mathematics curricula What features characterize Standards based curricula How well

do such curricula work To answer these questions the editors invited researchers who had investigated the implementation of 12 different Standards based mathematics curricula to describe the effects of these curricula on students learning and achievement and to provide evidence for any claims they made In particular authors were asked to identify content on which performance of students using Standards based materials differed from that of students using more traditional materials and content on which performance of these two groups of students was virtually identical Additionally four scholars not involved with the development of any of the materials were invited to write critical commentaries on the work reported in the other chapters Section I of Standards Based School Mathematics Curricula provides a historical background to place the current curriculum reform efforts in perspective a summary of recent recommendations to reform school mathematics and a discussion of issues that arise when conducting research on student outcomes Sections II III and IV are devoted to research on mathematics curriculum projects for elementary middle and high schools respectively The final section is a commentary by Jeremy Kilpatrick Regents Professor of Mathematics Education at the University of Georgia on the research reported in this book It provides a historical perspective on the use of research to guide mathematics curriculum reform in schools and makes additional recommendations for further research In addition to the references provided at the end of each chapter other references about the Standards based curriculum projects are provided at the end of the book This volume is a valuable resource for all participants in discussions about school mathematics curricula including professors and graduate students interested in mathematics education curriculum development program evaluation or the history of education educational policy makers teachers parents principals and other school administrators The editors hope that the large body of empirical evidence and the thoughtful discussion of educational values found in this book will enable readers to engage in informed civil discourse about the goals and methods of school mathematics curricula and related research Juli K.

Achievement Gap Stuart S. Yeh,2016-12-21 This book examines the cause of the student achievement gap suggesting that the prevailing emphasis on socioeconomic factors sociocultural influences and teacher quality is misplaced The cause of the achievement gap is not differences in parenting styles or the economic advantages of middle class parents or differences in

the quality of teachers. Instead, schools present learning tasks and award grades in ways that inadvertently undermine the self-efficacy, engagement, and effort of low-performing students, causing demoralization and exacerbating differences in achievement that are seen to exist as early as kindergarten. This process systematically maintains and widens initial gaps in achievement that might otherwise be expected to disappear over the K-12 years. Misdiagnosis of the nature of the achievement gap has led to misguided solutions. The author draws upon a range of research studies to support this view and to offer recommendations for improvement.

Leading With Inquiry and Action Matthew Militello, Sharon F. Rallis, Ellen B. Goldring, 2009-07-23. This essential guide for educational leaders skillfully blends scholarship with practice and integrates theory with real-world examples. Through case studies, the authors show the reader how to develop, support, and improve a collaborative inquiry action process for improving teaching and learning. If we are going to have schools that successfully educate all students to high standards, then we need principals who translate the lessons of this book into practice. Andrew Lachman, Executive Director, Connecticut Center for School Change. Enhance learning with a collaborative inquiry-based system of leadership. With sociopolitical forces prompting calls for school improvement, school leaders look for ways to expand their expertise in instructional leadership and strengthen their role in shaping classroom practice. *Leading With Inquiry and Action* presents a systematic, ongoing process for collecting information, making decisions, and taking action to improve instruction and raise student achievement. The authors illustrate this collaborative inquiry action cycle with a running vignette of an experienced principal and offer questions and exercises to guide individual reflection and group discussion. Thoroughly grounded in research, this book helps administrators identify areas for instructional improvement, determine community-supported solutions, and build stakeholder commitment. Articulate an action plan based on multiple data sources. Take steps that support teacher development. Systematically evaluate program results. Educational improvement requires informed leadership. This practical guide provides an efficient and functional framework for transforming current or aspiring principals into inquiry-minded, action-oriented instructional leaders.

Every Math Learner, Grades 6-12 Nanci N. Smith, 2017-02-02. Differentiation that shifts your instruction and boosts ALL student learning. Nationally recognized math differentiation expert Nanci Smith debunks the myths surrounding differentiated instruction, revealing a practical approach to real learning differences. Theory-lite and practice-heavy, this book provides a concrete and manageable framework for helping all students know, understand, and even enjoy doing mathematics. Busy secondary mathematics educators learn to provide practical structures for assessing how students learn and process mathematical concepts. Information design, implement, manage, and formatively assess and respond to learning in a standards-aligned, differentiated classroom. Adjust current materials to better meet students' needs. Includes classroom videos and a companion website.
