Forensic Approaches to Death, Disaster and Abuse Marc Oxenham, 2008 During the last 100 years infant mortality
rates have improved dramatically yet even in a developed country such as Australia the physical health of infants varies
greatly despite advances in science and technology It has now become clear that emotional and physical development is
affected by many different variables Not only must physical development and health support be adequate but the presence of
factors such as good enough parenting and the absence of others such as substance abuse and domestic violence are now
becoming better understood So how best to work with families where infants are at risk This is the substance of this book to
understand how to achieve improved outcomes for infants growing up in situations of risk mainly in the area of the parents
mental health but also in other related psychosocial circumstances that may impair parental functioning These include
migration substance abuse and infant hospitalisation Throughout this book the authors examine the effects of adverse life
circumstances on infant and family and in most cases also describe assessments and interventions Several chapters have
been written by people personally affected by mental illness or mental illness of a family member This provides in depth and
often poignant understanding of the perspective of those living with the effects of such illnesses and helps to expand our
knowledge and skills to work with at risk families **Deviant Burial in the Archaeological Record** Eileen M.

Murphy, 2008-08-19 This edited volume contains twelve papers that present evidence on non normative burial practices from
the Neolithic through to Post Medieval periods and includes case studies from some ten countries It has long been
recognised by archaeologists that certain individuals in a variety of archaeological cultures from diverse periods and
locations have been accorded differential treatment in burial relative to other members of their society These individuals can
include criminals women who died during childbirth unbaptised infants people with disabilities and supposed revenants to
name but a few Such burials can be identifiable in the archaeological record from an examination of the location and external
characteristics of the grave site Furthermore the position of the body in addition to its association with unusual grave goods
can be a further feature of atypical burials The motivation behind such non normative burial practices is also diverse and can
be related to a wide variety of social and religious beliefs It is envisaged that the volume will make a significant contribution
towards our understanding of the complexities involved when dealing with non normative burials in the archaeological
