Dilligan, 2007-05-08 This book reflects thirty years of experience in the applications of computer technology to literary research and instruction and in consulting work in office automation and system integration In that time I have again and again found myself in the position of having to introduce students both undergraduate and graduate colleagues and clients to the fundamentals of computer hardware and software Over the years as computers became both central and commonplace in professional life I have been aware of changing attitudes toward this technology From attitudes that ranged from the disdain of platonic dialecticians for

mere technology to intimidation bordering at times almost on terror people have moved to incorporate this new technology into their frame of reference *humani nil a me alienum* The development of the microprocessor and its subsequent use for word processing marked one important watershed The widespread use of word processors made it more likely than not that people would own their own computers at least at work and use them as part of their work a day activities But while word processing provided some increased familiarity with computers it did not lead most individuals much beyond a knowledge of the usual incantations needed to control the MultiMate or Nota Bene or Word Perfect gnomes and as a result of unhappy experience a begrudging acceptance of the need to make back up copies of important files

**Publication**, 1964 **The Science of Describing** Brian W. Ogilvie, 2008-09-15 Out of the diverse traditions of medical humanism classical philology and natural philosophy Renaissance naturalists created a new science devoted to discovering and describing plants and animals Drawing on published natural histories manuscript correspondence garden plans travelogues watercolors and drawings The Science of Describing reconstructs the evolution of this discipline of description through four generations of naturalists In the late fifteenth and early sixteenth centuries naturalists focused on understanding ancient and medieval descriptions of the natural world but by the mid sixteenth century naturalists turned

toward distinguishing and cataloguing new plant and animal species To do so they developed new techniques of observing and recording created botanical gardens and herbaria and exchanged correspondence and specimens within an international community By the early seventeenth century naturalists began the daunting task of sorting through the wealth of information they had accumulated putting a new emphasis on taxonomy and classification Illustrated with woodcuts engravings and photographs The Science of Describing is the first broad interpretation of Renaissance natural history in more than a generation and will appeal widely to an interdisciplinary audience
