③ Regular Hexagon:

$$\begin{aligned} m\angle 1 &= \frac{360}{6} = 60^\circ \\ m\angle 2 &= \frac{1}{2}(60) = 30^\circ \\ m\angle 3 &= 60^\circ \end{aligned}$$

Automorphic Forms and Related Geometry: Assessing the Legacy of I.I. Piatetski-Shapiro James W. Cogdell, Freydoon Shahidi, David Soudry, 2014-04-01 This volume contains the proceedings of the conference Automorphic Forms and Related Geometry Assessing the Legacy of I I Piatetski Shapiro held from April 23-27 2012 at Yale University New Haven CT Ilya I Piatetski Shapiro who passed away on 21 February 2009 was a leading figure in the theory of automorphic forms The conference attempted both to summarize and consolidate the progress that was made during Piatetski Shapiro's lifetime by him and a substantial group of his co-workers and to promote future work by identifying fruitful directions of further investigation It was organized around several themes that reflected Piatetski Shapiro's main foci of work and that have promise for future development functoriality and converse theorems local and global functions and their periods adic functions and arithmetic geometry complex geometry and analytic number theory In each area there were talks to review the current state of affairs with special attention to Piatetski Shapiro's contributions and other talks to report on current work and to outline promising avenues for continued progress The contents of this volume reflect most of the talks that were presented at the conference as well as a few additional contributions They all represent various aspects of the legacy of Piatetski Shapiro

Topology, Geometry and Gauge fields Gregory L. Naber, 2010-09-24 This is a book on topology and geometry and like any books on subjects as vast as these it has a point of view that guided the selection of topics Naber takes the view that the rekindled interest that mathematics and physics have shown in each other of late should be fostered and that this is best accomplished by allowing them to cohabit The book weaves together rudimentary notions from the classical gauge theory of physics with the topological and geometrical concepts that became the mathematical models of these notions We ask the reader to come to us with some vague notion of what an electromagnetic field might be a willingness to accept a few of the more elementary pronouncements of quantum mechanics a solid background in real analysis and linear algebra and some of the vocabulary of modern algebra To such a reader we offer an excursion that begins with the definition of a topological space and finds its way eventually to the moduli space of anti self dual $SU(2)$ connections on S^4 with instanton number 1 I would go over both volumes thoroughly and make some minor changes in terminology and notation and correct any errors I find In this new edition a chapter on Singular Homology will be added as well as minor changes in notation and terminology throughout and some sections have been rewritten or omitted

Reviews of First Edition It is unusual to find a

book so carefully tailored to the needs of this interdisciplinary area of mathematical physics Naber combines a knowledge of his subject with an excellent informal writing style NZMS Newsletter this book should be very interesting for mathematicians and physicists as well as other scientists who are concerned with gauge theories Zentralblatt Fuer Mathematik *Geometry I* Marcel Berger, 2009-01-21 Volume I of this 2 volume textbook provides a lively and readable presentation of large parts of classical geometry For each topic the author presents an esthetically pleasing and easily stated theorem although the proof may be difficult and concealed The mathematical text is illustrated with figures open problems and references to modern literature providing a unified reference to geometry in the full breadth of its subfields and ramifications **Conformal**

Basic Algebraic Geometry I.R. Shafarevich, 2012-12-06 Algebraic geometry occupied a central place in the mathematics of the last century The deepest results of Abel Riemann Weierstrass many of the most important papers of Klein and Poincare belong to

this do mam At the end of the last and the beginning of the present century the attitude towards algebraic geometry changed abruptly Around 1910 Klein wrote When I was a student Abelian functions as an after effect of Jacobi s tradition were regarded as the undisputed summit of mathematics and each of us as a matter of course had the ambition to forge ahead in this field And now The young generation hardly know what Abelian functions are Vorlesungen tiber die Entwicklung der Mathematik im XIX Jahrhundert Springer Verlag Berlin 1926 Seite 312 The style of thinking that was fully developed in algebraic geometry at that time was too far removed from the set theoretical and axiomatic spirit which then determined the development of mathematics Several decades had to lapse before the rise of the theory of topological differentiable and complex manifolds the general theory of fields the theory of ideals in sufficiently general rings and only then it became possible to construct algebraic geometry on the basis of the principles of set theoretical mathematics Around the middle of the present century algebraic geometry had undergone to a large extent such a reshaping process As a result it can again lay claim to the position it once occupied in mathematics
