The Importance of Pi-Interactions in Crystal Engineering Edward R. T. Tiekink, Julio Zukerman-Schpector, 2012-03-22 Crystal engineers aim to control the way molecules aggregate in the crystalline phase and are therefore concerned with crystal structure prediction polymorphism and discovering the relative importance of different types of intermolecular forces and their influence on molecular structure In order to design crystal structures knowledge of the types strengths and nature of possible intermolecular interactions is essential Non covalent interactions involving p systems is a theme that is under extensive investigation as these interactions can be inductors for the assembly of a vast array of supramolecular architectures The Importance of Pi Interactions in Crystal Engineering covers topics ranging from the identification of interactions involving p systems their impact on molecular and crystal structure in

both organic and metallorganic systems and how these interactions might be exploited in the design of new materials Specialist reviews are written by internationally recognized researchers drawn from both academia and industry The Importance of π Interactions in Crystal Engineering provides an essential overview of this important aspect of crystal engineering for both entrants to the field as well as established practitioners and for those working in crystallography medicinal and pharmaceutical sciences solid state chemistry physical chemistry materials and nanotechnology
