Fostering Children's Mathematical Power Arthur J.

Baroody, Ronald T. Coslick, 1998-09-01 Teachers have the responsibility of helping all of their students construct the disposition and knowledge needed to live successfully in a complex and rapidly changing world To meet the challenges of the 21st century students will especially need mathematical power a positive disposition toward mathematics curiosity and self confidence facility with the processes of mathematical inquiry problem solving reasoning and communicating and well connected mathematical knowledge an understanding of mathematical concepts procedures and formulas This guide seeks to help teachers achieve the capability to foster children s mathematical power the ability to excite them about mathematics help them see that it makes sense and enable them to harness its might for solving everyday and extraordinary problems The investigative approach attempts to foster mathematical power by making mathematics instruction process based understandable or relevant to the everyday life of students Past efforts to reform mathematics instruction have focused on only one or two of these aims whereas the investigative approach accomplishes all three By teaching content in a purposeful context an inquiry based fashion and a meaningful manner this approach promotes children s mathematical learning in an interesting thought provoking and comprehensible way This teaching guide is designed to help teachers appreciate the need for the investigative approach and to provide practical advice on how to make this approach happen in the classroom It not only dispenses information but also serves as a catalyst for exploring conjecturing about discussing and contemplating the teaching and learning of mathematics Thinking and Problem Solving Richard E. Fundamental Constructs in

Mathematics Education Sue Johnston-Wilder, John Mason, 2004-01-22 Fundamental Constructs in Mathematics Education is a unique sourcebook which has been crafted from a collection of classic tasks extracts and texts that have been quoted repeatedly in mathematics education literature Linked together by the editors narrative the book provides a fascinating examination of key constructs in mathematics education The book is divided into two parts The first part examines thinking

about the learner and includes the following constructs constructivisms activity theory and didactics Beginning with a chapter dedicated to the classic tasks used by researchers to probe learners understanding readers are encouraged to try these theories themselves with learners and be knowledgeable when they encounter them in other writing The second part focuses on thinking and teaching and includes issues of getting started keeping going and bringing to a conclusion Bringing together writing from Balacheff Brousseau Bruner Cobb Comfrey Freudenthal Greeno Marton Piaget Schon Vygotsky and many others this unique examination of constructs in mathematics education will be a valuable resource for anyone reading literature related to learning mathematics be they a teacher adviser or a student on a masters or PhD course **The**

Middleton,Jinfa Cai,Stephen Hwang,2015-05-05 In recent years funding agencies like the Institute of Educational Sciences and the National Science Foundation have increasingly emphasized large scale studies with experimental and quasi experimental designs looking for objective truths Educational researchers have recently begun to use large scale studies to understand what really works from developing interventions to validation studies of the intervention and then to efficacy studies and the final scale up for large implementation of an intervention Moreover modeling student learning developmentally taking into account cohort factors issues of socioeconomics local political context and the presence or absence of interventions requires the use of large data sets wherein these variables can be sampled adequately and inferences made Inroads in quantitative methods have been made in the psychometric and sociometric literatures but these methods are not yet common knowledge in the mathematics education community In fact currently there is no volume devoted to discussion of issues related to large scale studies and to report findings from them This volume is unique as it directly discusses methodological issue in large scale studies and reports empirical data from large scale studies
