Input - Output Organization :-

Connection of I/O bus to input - output devices is shown in the fig 1 →

The main function of input - output interface circuit are data conversion, synchronization and device selection. I/O bus consists of data lines, address lines and control lines.

When the address is made available in the address lines, the processor provides a function code i.e. I/O command in the control lines.

A control command is issued to activate the peripheral and to inform it what to do.

A status command is used to test various status conditions in the interface and the peripheral.
