Ida,2012-12-06 Microwave testing has been paid only scant attention in the literature as a method for nondestructive testing of materials yet it offers some attractive features especially for the testing of composite and other non metallic materials Microwave techniques have been used in a large number of applications that can be classified as nondestructive testing applications ranging from large scale remote sensing to detection of tumors in the body This volume describes a unified approach to microwave

nondestructive testing by presenting the three essential components of testing theory practice and modelling While recognizing that each of these subjects is wide enough to justify a volume of its own the presentation of the three topics together shows that these are interrelated and should be practiced together While few will argue against a good theoretical background modelling and simulation of the testing environment is seldom part of the NDT training in any method but particularly so in microwave testing The text is divided in four parts The first part presents the field theory background necessary for understanding the microwave domain The second part treats microwave measurements as well as devices and sources and the third part discusses practical tests applicable to a variety of materials and geometries The fourth part discusses modelling of microwave testing Each chapter contains a bibliography intended to expand on the material given and in particular to point to subjects which could not be covered either as not appropriate or for lack of space For engineers applied physicists material scientists

**Practical Approach to Substrate Integrated Waveguide (SIW) Diplexer: Emerging Research and Opportunities** Nwajana, Augustine Onyenwe, Yeo, Kenneth Siok Kiam, 2020-02-07 Substrate integrated waveguide SIW technology is a twenty first century transmission line that has evolved recently to open new doors to the development of efficient circuits and devices operating in the microwave and millimeter wave frequency range Microstrip circuits and devices are inefficient at high frequency applications and require very stringent manufacturing tolerances when used to implement microwave and millimeter wave components This is as a result of the fact that wavelengths are short at higher frequencies Waveguide circuits and devices are preferred for higher frequency applications but they are expensive and difficult to manufacture It is also very challenging to integrate a waveguide device with planar devices in its vicinity The SIW bridges the gap between the traditional air filled waveguide and planar transmission lines such as microstrip Practical Approach to Substrate Integrated Waveguide SIW Diplexer Emerging Research and Opportunities is an essential reference source that discusses the development of efficient circuits and devices operating in the microwave and millimeter wave frequency range through the use of substrate integrated waveguides Featuring research on topics such as microstrip resonators circuit model analysis and quality factor extraction this book is ideally designed for researchers engineers scientists developers scholars practitioners educators policymakers and students
