Provided by publisher *Parks in Medieval England* S. A. Miles, 2009-07-16 Parks were prominent and indeed controversial features of the medieval countryside but they have been unevenly studied and remain only partly understood Stephen Miles provides the first full length study of the subject examining parks across the country and throughout the Middle Ages in their full social economic jurisdictional and landscape context The first half of the book investigates the purpose of these royal and aristocratic reserves which have been variously claimed as hunting grounds economic assets landscape settings for residences and status symbols An emphasis on the aristocratic passion for the chase as the key motivation for park making provides an important challenge to more recent views and allows for a deeper appreciation of the connection between park making and the expression of power and lordship The second part of the volume examines the impact of park creation on wider society from the king and aristocracy to peasants and townsmen Instead of the traditional emphasis on the importance of royal regulation greater attention is paid to the effects of lordly park making on other members of the landed elite and ordinary people These widespread enclosures interfered with customary uses of woodland and waste hunting practices roads and farming not surprisingly they could become a focus for aristocratic feud popular protest and furtive resistance Combining historical archaeological and landscape evidence this ground breaking work provides fresh insight into contemporary values and how they helped to shape the medieval landscape

Dialog Theory for Critical Argumentation Douglas N. Walton, 2007-09-19 Because of the need to devise systems for electronic communication on the internet multi agent computing is moving to a model of communication as a structured conversation between rational agents For example in multi agent systems an electronic agent searches around the internet and collects certain kinds of information by asking questions to other agents Such agents also reason with each other when they engage in negotiation and persuasion It is shown in this book that critical argumentation is best represented in this framework by the model of reasoned argument called a dialog in which two or more parties engage in a polite and orderly exchange with each other according to rules governed by conversation policies In such dialog argumentation the two parties reason together by taking turns asking questions offering replies and offering reasons to support a claim They try to settle their disagreements by an orderly conversational exchange that is partly adversarial and partly collaborative

A Cultural History of the Senses in the Middle Ages Richard G. Newhauser, 2014-10-23 Understanding the senses is indispensable for comprehending the Middle Ages because both a theoretical and a practical involvement with the senses played a central role in the development of ideology and cultural practice in this period For the long medieval millennium the senses were not limited to the five we think of speech for example was categorized among the senses of the mouth And sight and hearing were not always the dominant senses for the medical profession taste was more decisive Nor were the senses only passive

receptors they were understood to play an active role in the process of perception and were also a vital element in the formation of each individual's moral identity. From the development of specifically urban or commercial sensations to the sensory regimes of holiness from the senses as indicators of social status revealed in food to the Scholastic analysis of perception this volume demonstrates the importance of sensory experience and its manifold interpretations in the Middle Ages. *A Cultural History of the Senses in the Middle Ages* presents essays on the following topics: the social life of the senses, urban sensations, the senses in the marketplace, the senses in religion, the senses in philosophy and science, medicine and the senses, the senses in literature, art and the senses and sensory media.

Responsive Curriculum Design in Secondary Schools Douglas Fisher, Nancy Frey, 2001-11-19 More than ever before as they teach to an increasingly diverse population, educators need a clear, concise guide to designing and implementing responsive curriculum. This book, built around the lessons of classroom teachers, provides the how of instruction design. The first section identifies the most important components of design: addressing standards, designing multiple assessments, identifying richly detailed source materials, and creating interrelated lessons and culminating activities. Section two expands on the needs of diverse learners, and the concluding section contains a completed instructional plan easily adaptable to your content and grade level.

The Posing of Questions A. Wisniewski, 2013-11-27 This book is a study in the logic of questions, sometimes called erotetic logic. The central topics in erotetic logic have been the structure of questions and the question-answer relationship. This book doesn't neglect these problems, but much of it is focussed on other issues. The main subject is the logical analysis of certain relations between questions and the contexts of their appearance. And our aim is to elaborate the conceptual apparatus of the inferential approach to the logic of questions. Questions are asked for many reasons and for different purposes. Yet before a question is asked or posed, a questioner must arrive at it. In many cases, arriving at a question resembles coming to a conclusion; there are some premises involved, and some inferential thought processes take place. If we agree that a conclusion need not be conclusive, we may say that sometimes questions can play the role of conclusions. But questions can also perform the role of premises: we often pass from some initial question to another question. In other words, there are inferential thought processes we shall call them erotetic inferences, in which questions play the roles of conclusions or conclusions and premises. The inferential approach to the logic of questions focusses its attention on the analysis of erotetic inferences. This book consists of eight chapters.

Historical Anthropology of the Middle Ages Aaron Gurevich, 1992-08 Aaron Gurevich has long been considered one of the world's leading medievalists and a pioneer in the field of historical anthropology. This book brings together eleven of his most important essays, many difficult to find and some never before available in English. Gurevich's writing, while informed by the history of mentalities as practiced by the French school of Le Goff and Duby, reflects a broader view of European culture outside France. He rejects reductionist concepts and operates with a total view of culture, using a wide range of sources: legal as well as ecclesiastical, popular as well as learned, oral and visual as well as literary. This

collection amply demonstrates this breadth of Gurevich's work and highlights his ability to synthesize historical anthropological and semiotic approaches to culture. Especially valuable are pieces such as Gurevich's essay *Wealth and Gift Bestowal Among the Ancient Scandinavians* about the importance of gift exchange in the medieval world. One of the first studies for this practice, this classic essay has for years been unavailable. Other pieces range from the deities and heroes of Germanic poetry to the image of the Beyond in the Middle Ages.

Dark Ages Lee McIntyre, 2009-02-13 Why the prejudice against adopting a scientific attitude in the social sciences is creating a new Dark Ages and preventing us from solving the perennial problems of crime, war, and poverty. During the Dark Ages, the progress of Western civilization virtually stopped. The knowledge gained by the scholars of the classical age was lost for nearly 600 years. Life was governed by superstitions and fears fueled by ignorance. In this outspoken and forthright book, Lee McIntyre argues that today we are in a new Dark Age that we are as ignorant of the causes of human behavior as people centuries ago were of the causes of such natural phenomena as disease, famine, and eclipses. We are no further along in our understanding of what causes war, crime, and poverty and how to end them than our ancestors. We need, McIntyre says, another scientific revolution; we need the courage to apply a more rigorous methodology to human behavior to go where the empirical evidence leads us.

even if it threatens our cherished religious or political beliefs about human autonomy race class and gender Resistance to knowledge has always arisen against scientific advance Today s academics economists psychologists philosophers and others in the social sciences stand in the way of a science of human behavior just as clerics attempted to block the Copernican revolution in the 1600s A scientific approach to social science would test hypotheses against the evidence rather than find and use evidence only to affirm a particular theory as is often the practice in today s social sciences Drawing lessons from Galileo s conflict with the Catholic church and current debates over the teaching of creation science McIntyre argues that what we need most to establish a science of human behavior is the scientific attitude the willingness to hear what the evidence tells us even if it clashes with religious or political pieties and the resolve to apply our findings to the creation of a better society *Study Guide for Problems in American History* Lena A. Ely, Edith King, Martin James Stormzand, 1926
