speech perception and speech production Undeniably a neurolinguistic examination of speech production can enrich our understanding of how human brains compute linguistic information at a cognitive level However it is insufficient by only focusing on the neurocognitive dimension of speech production given that individuals speech production can be subject to various individual differences factors either cognitively affectively or socio culturally It is therefore necessary to move beyond the neurocognitive understanding of speech production by taking every possible perspective into consideration Individual difference as an umbrella term covers psychological traits personal characteristics cognitive and emotional components that distinguish learners from each other Given that individual difference factors can reveal disparities in L2 learning and performance among learners such factors have attracted researchers growing interest concerning their influences on L2 speech processing their relationships with L2 speech performance and their contributions to L2 speech development Nevertheless our understanding of L2 speech production is not only insufficient compared to other L2 skills such as writing and reading but also limited to the neurocognitive account of L2 speech production More research therefore is in urgent need to uncover the influence of various individual differences factors on L2 speech production from multidisciplinary perspectives English Exam Practice Vera Yap,2015 *Longman Activate Senior Secondary* Sarah Rigby,Kitty Wong,2015
