Geotechnical Engineering for the Preservation of Monuments and Historic Sites III Renato Lancellotta,Carlo Viggiani,Alessandro Flora,Filomena de Silva,Lucia Mele,2022-06-15 The conservation of monuments and historic sites is one of the most challenging problems facing modern civilization It involves in inextricable patterns factors belonging to different fields cultural humanistic social technical economical administrative and the requirements of safety and use appear to be or often are in conflict with the respect of the integrity of the monuments The complexity of the topic is such that a shared framework of reference is still lacking among art historians architects structural and geotechnical engineers The complexity of the subject is such that a shared frame of reference is still lacking among art historians architects architectural and geotechnical engineers And while there are exemplary cases of an integral approach to each building element with its static and architectural function as a material witness to the culture and construction techniques of the original historical period there are still examples of uncritical reliance on modern technology leading to the substitution from earlier structures to new ones preserving only the iconic look

of the original monument Geotechnical Engineering for the Preservation of Monuments and Historic Sites III collects the contributions to the eponymous 3rd International ISSMGE TC301 Symposium Naples Italy 22-24 June 2022. The papers cover a wide range of topics which include Principles of conservation maintenance strategies case histories The knowledge investigations and monitoring Seismic risk site effects soil structure interaction Effects of urban development and tunnelling on built heritage Preservation of diffuse heritage soil instability subsidence environmental damages The present volume aims at geotechnical engineers and academics involved in the preservation of monuments and historic sites worldwide
