The future is uncertain, a bit spooky, possibly dangerous, maybe wonderful. We cope with this never-ending uncertainty by telling stories about the future, future stories. How do we construct those stories? Where is the future, the place where we set those stories? Can we trust our future stories? And what sort of futures do they show us? This book is about future stories and future thinking about how we prepare for the future. Think of it as a sort of User's Guide to the Future. We all need such a guide because the future is where we will spend the rest of our lives. David Christian, historian and author of *Origin Story*, is renowned for pioneering the emerging discipline of Big History, which surveys the whole of the past. But with *Future Stories*, he casts his sharp analytical eye forward, offering an introduction to the strange world of the future and a guide to what we think we know about it at all scales, from the individual to the cosmological. Christian consults theologians, philosophers, scientists, statisticians, and scholars from a huge range of places and times as he explores how we prepare for uncertain futures, including the future of human evolution, artificial intelligence, interstellar travel, and more. By linking the study of the past much more closely to the study of the future, we can begin to imagine what the world will look like in a hundred years and consider solutions to the biggest challenges facing us all. *Bibliography of Continental Drift and Plate Tectonics* Tina Kasbeer, 1973 *Children's Books in Print, 2007*, 2006 **Earth Science** William L.
