improvement of people's lives by replacing, restoring, improving, supplementing or enhancing natural output from the central nervous system. It is a useful guide for readers interested in understanding how neural bases for cognitive and sensory functions such as seeing, hearing and remembering relate to real world technologies. More precisely, this handbook details clinical, therapeutic and human computer interfaces, applications of BCI and various aspects of human cognition and behavior such as perception, affect and action. It overviews the different methods and techniques used in acquiring and pre-processing brain signals, extracting features and classifying users' mental states and intentions. Various theories, models and empirical findings regarding the ways in which the human brain interfaces with external systems and environments using BCI are also explored. The handbook concludes by engaging ethical considerations, open questions and challenges that continue to face brain computer interface research. Features an in-depth look at the different methods and techniques used in acquiring and pre-processing brain signals, extracting features and classifying the user's intention. Covers various theories, models and empirical findings regarding ways in which the human brain can interface with the systems or external environments. Presents applications of BCI technology to understand various aspects of human cognition and behavior such as perception, affect, action and more. Includes clinical trials and individual case studies of the experimental therapeutic applications of BCI. Provides human factors and human computer interface concerns in the design, development and evaluation of BCIs. *Characterisation of Soft Magnetic Materials Under Rotational Magnetisation* Stanislaw Zurek, 2017-11-22. The book presents practical aspects related to the measurement of rotational power loss in soft magnetic materials. The book furthermore focuses on practical aspects of performing such measurements, the associated difficulties as well as solutions to the most common problems. Numerous practical aspects, hands-on experience and most commonly encountered pitfalls are heavily discussed in the book. The text begins with an introduction to magnetism, then follows with definitions of measurement methods of rotational power loss from physical

viewpoint Two chapters describe and detail the various sensors which can be employed for such measurements as well as all the aspects of designing making and using a magnetising apparatus A synthesis of the likely optimal design of a magnetising apparatus is also given preceded with the full reasoning based on all the research carried out to date Characterisation of Soft Magnetic Materials Under Rotational Magnetisation serves as an excellent starting point for any student having to perform magnetic measurements under rotational magnetisation but also under 1D 2D or 3D excitation Because the methods sensors and apparatus are extensively discussed it will also be a great reference for more senior researchers and experts in the field There is a whole chapter devoted to analysis of measurement uncertainty This subject is rarely published for magnetic measurements which makes it more difficult for all researchers to understand the concepts and methodology used in uncertainty estimation This chapter not only introduces the whole subject but also provides multiple step by step examples which can be easily followed from very simple cases to much more complex ones All equations are presented with full SI units which greatly helps in practical application of the presented methodology Each chapter is written in such a way that it can be studied on its own so that the reader can focus only on the specific aspects as required
