Vahrenhold, 2015-09-23 This book constitutes the refereed proceedings of the 8th International Conference on Informatics in Schools Situation Evolution and Perspectives ISSEP 2015 held in Ljubljana Slovenia in September October 2015 The 14 full papers presented together with 3 invited talks were carefully reviewed and selected from 36 submissions The focus of the conference was on following topics sustainable education in informatics for pupils of all ages connecting informatics lessons to the students everyday lives teacher education in informatics and research on informatics in schools empirical qualitative quantitative theory building research methods comparative studies transferability of methods and results from other

disciplines **Proceedings of the 9th Workshop on Aspects, Components, and Patterns for Infrastructure Software (ACP4IS '10)** Bram Adams, Michael Haupt, Daniel Lohmann, 2010 Aspect oriented programming component models and design patterns are modern and actively evolving techniques for improving the modularization of complex software. In particular, these techniques hold great promise for the development of systems infrastructure software, e.g., application servers, middleware, virtual machines, compilers, operating systems, and other software that provides general services for higher level applications. The developers of infrastructure software are faced with increasing demands from application programmers needing higher level support for application development. Meeting these demands requires careful use of software modularization techniques, since infrastructural concerns are notoriously hard to modularize. Aspects, components, and patterns provide very different means to deal with infrastructure software, but despite their differences, they have much in common. For instance, component models try to free the developer from the need to deal directly with services like security or transactions. These are primary examples of crosscutting concerns, and modularizing such concerns are the main target of aspect oriented languages. Similarly, design patterns like Visitor and Interceptor facilitate the clean modularization of otherwise tangled concerns. Building on the ACP4IS meetings at AOSD 2002, 2009, this workshop aims to provide a highly interactive forum for researchers and developers to discuss the application of and relationships between aspects, components, and patterns within modern infrastructure software. The goal is to put aspects, components, and patterns into a common reference frame and to build connections between the software engineering and systems communities.

Language Processing and Grammars Brian Nolan, Carlos Perinán-Pascual, 2014-04-15 There is a growing awareness of the significance and value that modelling using information technology can bring to the functionally oriented linguistic enterprise. This encompasses a spectrum of areas as diverse as concept modelling, language processing, and grammar modelling, conversational agents, and the visualisation of complex linguistic information in a functional linguistic perspective. This edited volume offers a collection of papers dealing with different aspects of computational modelling of language and grammars within a functional perspective at both the theoretical and application levels. As a result, this volume represents the first instance of contemporary functionally oriented computational treatments of a variety of important language and linguistic issues. This book presents current research on functionally oriented computational models of grammar, language processing, and linguistics concerned with a broadly functional computational linguistics that also contributes to our understanding of languages within a functional and cognitive linguistic computational research agenda.
