Handbook addresses the major aspects of designing fabricating and enabling robotic systems and their various applications It  
presents kinetic and dynamic methods for analyzing robotic systems considering factors such as force and torque From these  
analyses the book develops several controls approaches including servo actuation hybrid control and trajectory planning  
Design aspects include determining specifications for a robot determining its configuration and utilizing sensors and  
actuators The featured applications focus on how the specific difficulties are overcome in the development of the robotic  
system With the ability to increase human safety and precision in applications ranging from handling hazardous materials  
and exploring extreme environments to manufacturing and medicine the uses for robots are growing steadily The Robotics
