Mathematics Teaching, 1800-2000 Peggy Aldrich Kidwell, Amy Ackerberg-Hastings, David Lindsay Roberts, 2008-08-11

From the blackboard to the graphing calculator the tools developed to teach mathematics in America have a rich history shaped by educational reform technological innovation and spirited entrepreneurship In *Tools of American Mathematics Teaching 1800 2000* Peggy Aldrich Kidwell Amy Ackerberg Hastings and David Lindsay Roberts present the first systematic historical study of the objects used in the American mathematics classroom They discuss broad tools of presentation and pedagogy not only blackboards and textbooks but early twentieth century standardized tests teaching machines and the overhead projector tools for calculation and tools for representation and measurement Engaging and accessible this volume tells the stories of how specific objects such as protractors geometric models slide rules electronic calculators and computers came to be used in classrooms and how some disappeared *Computer Algebra Handbook* Johannes Grabmeier, Erich

Kaltofen, Volker Weispfenning, 2012-12-06 Two ideas lie gleaming on the jeweler s velvet The first is the calculus the second the algorithm The calculus and the rich body of mathematical analysis to which it gave rise made modern science possible but it has been the algorithm that has made possible the modern world David Berlinski *The Advent of the Algorithm* First there was the concept of integers then there were symbols for integers I II III 1 1 1 1 fttt what might be called a sticks and stones representation I II III IV V Roman numerals 1 2 3 4 5 Arabic numerals etc Then there were other concepts with symbols for them and algorithms sometimes for manipulating the new symbols Then came collections of mathematical knowledge tables of mathematical computations theorems of general results Soon after algorithms came devices that provided assistance for carrying out computations Then mathematical knowledge was organized and structured into several related concepts and symbols logic algebra analysis topology algebraic geometry number theory combinatorics etc This organization and abstraction lead to new algorithms and new fields like universal algebra But always our symbol systems reflected and influenced our thinking our concepts and our algorithms *Maple User's Guide* Bruce W. Elasticity J.R. Barber, 2006-04-11 Since the first edition of this book was published there have been major improvements in symbolic mathematical languages such as Maple and Mathematica and this has opened up the possibility of solving considerably more complex and hence interesting and realistic elasticity problems as classroom examples It also enables the student to focus on the formulation of the problem e.g. the appropriate governing equations and boundary conditions rather than on the algebraic manipulations with a consequent improvement in insight into the subject and in motivation During the past 10 years I have developed files in Maple and Mathematica to facilitate this process notably electronic versions of the

Tables in the present Chapters 19 and 20 and of the recurrence relations for generating spherical harmonics One purpose of this new edition is to make this electronic material available to the reader through the Kluwer website www.elasticity.org I hope that readers will make use of this resource and report back to me any aspects of the electronic material that could benefit from improvement or extension Some hints about the use of this material are contained in Appendix A Those who have never used Maple or Mathematica will find that it takes only a few hours of trial and error to learn how to write programs to solve boundary value problems in elasticity

Modelling and Graphics in Science and Technology Jose Teixeira, Joachim Rix, 2012-12-06 Graphics and Modelling are key technologies to support visualisation and product development tasks Based on the recent developments in the areas of scientific visualisation interaction techniques distributed systems and product design in industrial and applied research have improved the possibilities for further approaches and issues and for exchanging experiences A workshop on Graphics and Modelling in Science Technology was held in Coimbra Portugal in June 1994 and the programme committee selected 19 papers for presentation The workshop had a good international participation Due to the extensive scientific contacts between Portuguese and German researchers the workshop included the third Luso German Computer Graphics Meeting This book reflects the results of the workshop The papers were updated after the workshop presentations to reflect the discussions during the meeting Corresponding to the different topics addresses in the workshop the book is divided into the following six sections CAD Models and Architectures Short overviews of the Reference Architecture for CAD and the Integration Concept for CAD applications are given in this section The integration ability of the international standard STEP is analysed as well as STEP's integration approaches for product data sharing and product data exchange
