Bensky, 2007 Over the past few years search engine optimization has developed into something of a science as webmasters and business owners try to figure out how to trick the internet search engines into listing THEIR sites near the top of the search results list A number of big pricey books have been written on the subject But it really is not that complicated We've boiled it down to FIVE SIMPLE STEPS that just about anybody can follow It's so simple that this book is fewer than 50 pages long You won't get bogged down with boring technical descriptions and geek speak this book is written in easy to read plain English with plenty of examples and clear descriptions of technical terms where they are absolutely necessary But I'm not a web designer You don't need to be You just need to be able to create simple web pages I don't have a budget for paid ads This book is not about paying for sponsored links adwords or any other kind of paid advertising The technique we describe will cost you nothing other than the price of this book and some of your time *Keyword Search in Databases* Jeffrey Xu Yu, Lijun Chang, Lu Qin, 2022-06-01 It has become highly desirable to provide users with flexible ways to query search information over databases as simple as keyword search like Google search This book surveys the recent developments on keyword search over databases and focuses on finding structural information among objects in a database using a set of keywords Such structural information to be returned can be either trees or subgraphs representing how the objects that contain the required keywords are interconnected in a relational database or in an XML database The structural keyword search is completely different from finding documents that contain all the user given keywords The former focuses

on the interconnected object structures whereas the latter focuses on the object content The book is organized as follows In Chapter 1 we highlight the main research issues on the structural keyword search in different contexts In Chapter 2 we focus on supporting structural keyword search in a relational database management system using the SQL query language We concentrate on how to generate a set of SQL queries that can find all the structural information among records in a relational database completely and how to evaluate the generated set of SQL queries efficiently In Chapter 3 we discuss graph algorithms for structural keyword search by treating an entire relational database as a large data graph In Chapter 4 we discuss structural keyword search in a large tree structured XML database In Chapter 5 we highlight several interesting research issues regarding keyword search on databases The book can be used as either an extended survey for people who are interested in the structural keyword search or a reference book for a postgraduate course on the related topics Table of Contents Introduction Schema Based Keyword Search on Relational Databases Graph Based Keyword Search Keyword Search in XML Databases Other Topics for Keyword Search on Databases
