

# REQUIREMENTS ANALYSIS

## 4.1 SYSTEMS ENGINEERING PROCESS INPUTS

The inputs to the process include the customer's requirements and the project constraints. Requirements relate directly to the performance characteristics of the system being designed. They are the stated life-cycle customer needs and objectives for the system, and they relate to how well the system will work in its intended environment.

Constraints are conditions that exist because of limitations imposed by external interfaces, project support, technology, or life cycle support systems. Constraints bound the development teams' design opportunities.

Requirements are the primary focus in the systems engineering process because the process's primary purpose is to transform the requirements into designs. The process develops these designs within

the constraints. They eventually must be verified to meet both the requirements and constraints.

### Types of Requirements

Requirements are categorized in several ways. The following are common categorizations of requirements that relate to technical management:

**Customer Requirements:** Statements of fact and assumptions that define the expectations of the system in terms of mission objectives, environment, constraints, and measures of effectiveness and suitability (MOE/MOS). The customers are those that perform the eight primary functions of systems engineering (Chapter 1), with special emphasis on the operator as the key customer. Operational requirements will define the basic need and, at a minimum, answer the questions posed in Figure 4-1.

Asprey, Michael Middleton, 2003-01-01 Portals present unique strategic challenges in the academic environment Their conceptualization and design requires the input of campus constituents who seldom interact and whose interests are often opposite The implementation of a portal requires a coordination of applications and databases controlled by different campus units at a level that may never before have been attempted at the institution Building a portal is as much about constructing intra campus bridges as it is about user interfaces and content Designing Portals Opportunities and Challenges discusses the current status of portals in higher education by providing insight into the role portals play in an institution's business and educational strategy by taking the reader through the processes of conceptualization design and implementation of the portals in different stages of development at major universities and by offering insight from three producers of portal software systems in use at institutions of higher learning and elsewhere **Software Engineering and Computer**

*Health Informatics Meets EHealth* G. Schreier, D. Hayn, 2018-05-18 Biomedical engineering and health informatics are closely related to each other and it is often difficult to tell where one ends and the other begins but ICT systems in healthcare and biomedical systems and devices are already becoming increasingly interconnected and share the common entity of data This

is something which is set to become even more prevalent in future and will complete the chain and flow of information from the sensor via processing to the actuator which may be anyone or anything from a human healthcare professional to a robot. Methods for automating the processing of information such as signal processing, machine learning, predictive analytics and decision support are increasingly important for providing actionable information and supporting personalized and preventive healthcare protocols in both biomedical and digital healthcare systems and applications. This book of proceedings presents 50 papers from the 12th eHealth conference eHealth2018 held in Vienna, Austria, in May 2018. The theme of this year's conference is Biomedical Meets eHealth: From Sensors to Decisions, and the papers included here cover a wide range of topics from the field of eHealth. The book will be of interest to all those working to design and implement healthcare today.
