Improving Sustainability During Hospital Design and Operation Stefano Capolongo, Marta Carla Bottero, Maddalena Buffoli, Emanuele Lettieri, 2015-02-25 This book describes the Sustainable High Quality Healthcare SustHealth project which had the goal of developing an original multidisciplinary evaluation tool that can be applied to assess and improve hospitals overall sustainability The comprehensive nature of the appraisal offered by this tool exceeds the scope of most current rating systems which typically permit a thorough evaluation of relevant environmental factors when designing a new building but fail to consider social and economic impacts of the design phase or the performance of the hospital's operational structure in these fields The multidisciplinary evaluation system was developed from its very inception through to its testing by following a scientific experimental method in which a global perspective was constantly maintained as opposed to a focus only on specific technical issues Application of the SustHealth rating tool to a currently functioning hospital or one under design will identify weaknesses and guide users to potential low cost short term solutions and longer term strategies for improvement
