Maple® for Environmental Sciences Bill Scott, 2012-12-06 What is this book about? Please take this book as it is: a working document. It started as an idea that has grown. It will never be correct but should be self-correcting. In the limit, if there is one, the book should approach a correct state. It is not the detail and the numbers that matter but the structures and the order. These structures are inherently linked with the many minds that have made Maple the minds of perhaps the best mathematicians, certainly some of the most useful. Our environment is not separate from mathematics; mathematics is but one tool of several to help with understanding the environment. It is a harsh tool that requires numbers and symbolism. Maple handles the symbolism superbly; numbers need more consideration. We have included a substantial amount on reading and writing numbers, data, and dealing with floating point numbers. It is the devil in the detail that continually comes back to us in working with Mathematics and Maple. It becomes raw and defined. Many of the things we do have rational and logical bases but we don't know what they are. Often in following the code and talking with an input line to Maple, the detailed way of performing a task becomes clear. But not without frustration: the task is invariably simple though.

Educom Review ,1997 Computing and communications in colleges and universities *Applications of Abstract Algebra with MAPLE* Richard Klima,Neil Sigmon,Ernest Stitzinger,2019-07-17 The mathematical concepts of abstract algebra may indeed be considered abstract but its utility is quite concrete and continues to grow in importance Unfortunately the practical application of abstract algebra typically involves extensive and cumbersome calculations often frustrating even the most dedicated attempts to appreciate and employ its intricacies Now however sophisticated mathematical software packages help obviate the need for heavy number crunching and make fields dependent on the algebra more interesting and more accessible Applications of Abstract Algebra with Maple opens the door to cryptography coding Polya counting theory and the many other areas dependent on abstract algebra The authors have carefully integrated Maple V throughout the text enabling readers to see realistic examples of the topics discussed without struggling with the computations But the book stands well on its own if the reader does not have access to the software The text includes a first chapter review of the

mathematics required groups rings and finite fields and a Maple tutorial in the appendix along with detailed treatments of coding cryptography and Polya theory applications Applications of Abstract Algebra with Maple packs a double punch for those interested in beginning or advancing careers related to the applications of abstract algebra It not only provides an in depth introduction to the fascinating real world problems to which the algebra applies it offers readers the opportunity to gain experience in using one of the leading and most respected mathematical software packages available

Programming Languages and Systems in Computational Economics and Finance Soren Bo Nielsen, 2012-12-06

The developments within the computationally and numerically oriented areas of Operations Research Finance Statistics and Economics have been significant over the past few decades Each area has been developing its own computer systems and languages that suit its needs but there is relatively little cross fertilization among them yet This volume contains a collection of papers that each highlights a particular system language model or paradigm from one of the computational disciplines aimed at researchers and practitioners from the other fields The 15 papers cover a number of relevant topics Models and Modelling in Operations Research and Economics novel High level and Object Oriented approaches to programming through advanced uses of Maple and MATLAB and applications and solution of Differential Equations in Finance It is hoped that the material in this volume will whet the reader's appetite for discovering and exploring new approaches to old problems and in the longer run facilitate cross fertilization among the fields We would like to thank the contributing authors the reviewers the publisher and last but not least Jesper Saxtorph Anders Nielsen and Thomas Stidsen for invaluable technical assistance
