Guidelines for Chemical Process Quantitative Risk Analysis CCPS (Center for Chemical Process Safety), 2010-08-27

Chemical process quantitative risk analysis CPQRA as applied to the CPI was first fully described in the first edition of this CCPS Guidelines book This second edition is packed with information reflecting advances in this evolving methodology and includes worked examples on a CD ROM CPQRA is used to identify incident scenarios and evaluate their risk by defining the probability of failure the various consequences and the potential impact of those consequences It is an invaluable methodology to evaluate these when qualitative analysis cannot provide adequate understanding and when more information is needed for risk management This technique provides a means to evaluate acute hazards and alternative risk reduction strategies and identify areas for cost effective risk reduction There are no simple answers when complex issues are concerned but CPQRA2 offers a cogent well illustrated guide to applying these risk analysis techniques particularly to risk control studies Special Details Includes CD ROM with example problems worked using Excel and Quattro Pro For use with Windows 95 98 and NT

Marine Genetic Resources, Access and Benefit Sharing

Bevis Fedder, 2013-05-29 Access to genetic resources and Benefit Sharing ABS has been promoted under the Convention on Biological Diversity with the aim of combining biodiversity conservation goals with economic development However as this book shows since its inception in 1992 implementation has encountered multiple challenges and obstacles This is particularly so in the marine environment where interest in genetic resources for pharmaceuticals and nutrients has increased This is partly because of the lack of clarity of terminology but also because of the terms of the comprehensive law of the sea UNCLOS and transboundary issues of delineating ownership of marine resources The author explains and compares relevant provisions and concepts under ABS and the law of the sea taking access benefit sharing monitoring compliance and dispute settlement into consideration He also provides an overview of the implementation status of ABS relevant measures in user states and identifies successful ABS transactions A key unique feature of the book is to illustrate how biological databases can serve as the central scientific infrastructure to implement the global multilateral benefit sharing mechanism proposed by the Nagoya Protocol The research for this book was supported by both the Bremen International Graduate School for Marine Sciences GLOMAR and the International Research Training Group INTERCOAST Integrated Coastal Zone and Shelf Sea
