The Consciousness Paradox Rocco J. Gennaro, 2012 A defense of a version of the higher order thought HOT theory of consciousness with special attention to such topics as concepts and animal consciousness Consciousness is arguably the most important area within contemporary philosophy of mind and perhaps the most puzzling aspect of the world Despite an explosion of research from philosophers psychologists and scientists attempts to explain consciousness in neurophysiological or even cognitive terms are often met with great resistance In *The Consciousness Paradox* Rocco Gennaro aims to solve an underlying paradox namely how it is possible to hold a number of seemingly inconsistent views including higher order thought HOT theory conceptualism infant and animal consciousness concept acquisition and what he calls the HOT brain thesis He defends and further develops a metapsychological reductive representational theory of consciousness and applies it to several importantly related problems Gennaro proposes a version of the HOT theory of consciousness that he calls the wide intrinsicity view and shows why it is superior to various alternatives such as self representationalism and first order representationalism HOT theory says that what makes a mental state conscious is that a suitable higher order thought is directed at that mental state Thus Gennaro argues for an overall philosophical theory of consciousness while applying it to other significant issues not usually addressed in the philosophical literature on consciousness Most cognitive science and empirical works on such topics as concepts and animal consciousness do not address central philosophical theories of consciousness Gennaro's integration of empirical and philosophical concerns will make his argument of interest to both philosophers and nonphilosophers

Mind in a Physical World Jaegwon Kim, 2000 This book based on Jaegwon Kim's 1996 Townsend Lectures presents the philosopher's current views on a variety of issues in the metaphysics of the mind in particular the mind body problem mental causation and reductionism This book based on Jaegwon Kim's 1996 Townsend Lectures presents the philosopher's current views on a variety of issues in the metaphysics of the mind in particular the mind body problem mental causation and reductionism Kim construes the mind body problem as that of finding a place for the mind in a world that is fundamentally physical Among other points he redefines the roles of supervenience and emergence in the discussion of the mind body problem Arguing that various contemporary accounts of mental causation are inadequate he offers his own partially reductionist solution on the basis of a novel model of reduction Retaining the informal tone of the lecture format the book is clear yet sophisticated

Reason and Nature José Luis Bermúdez, Alan Millar, 2002 *Reason and Nature* investigates the normative dimension of reason and rationality and how it can be situated within the natural world Nine philosophers and two psychologists address three main themes The first concerns the status of norms of rationality and in particular how it is possible to show that norms we take to be objectively authoritative are so in fact The second has to do with the precise form taken by the norms of rationality The third concerns the role of norms of rationality in the psychological explanation of belief and action It is widely assumed that we use the normative principles of rationality as regulative principles governing psychological explanation This seems to demand that there is a certain harmony between the norms of rationality and the psychology of reasoning What then should we make of the well documented evidence suggesting that people consistently fail to reason well And how can we extend the model to non language using creatures As this collection testifies current work in the theory of rationality is subject to very diverse influences ranging from experimental and theoretical psychology through philosophy of logic and language to metaethics and the theory of practical reasoning This work is pursued in various philosophical styles and with various orientations Straight down the line analytical and largely a priori enquiry contrasts with empirically constrained theorizing A focus on human rationality contrasts with a focus on rationality in the wider natural world As things stand work in one style often proceeds in isolation from work in others If progress is to be made on rationality theorists will need to range widely *Reason and Nature* will provide a stimulus to that endeavour

Frame It Again José Luis Bermúdez, 2020-11-05 Framing effects are everywhere An estate tax looks very different to a death tax Gun safety seems to be one thing and gun control another Yet the consensus from decision theorists finance professionals psychologists and economists is that frame dependence is completely irrational This book challenges

that view Some of the toughest decisions we face are just clashes between different frames It is perfectly rational to value the same thing differently in two different frames even when the decision maker knows that these are really two sides of the same coin Frame It Again sheds new light on the structure of moral predicaments the nature of self control and the rationality of co operation Framing is a powerful tool for redirecting public discussions about some of the most polarizing contemporary issues such as gun control abortion and climate change Learn effective problem solving and decision making to get the better of difficult dilemmas

Ten Lectures on Cognition, Mental Representation, and the Self Robert D. Rupert, 2023-05-01 These ten lectures articulate a distinctive vision of the structure and workings of the human mind drawing from research on embodied cognition as well as from historically more entrenched approaches to the study of human thought On the author's view multifarious materials co contribute to the production of virtually all forms of human behavior rendering implausible the idea that human action is best explained by processes taking place in an autonomous mental arena those in the conscious mind or occurring at the so called personal level Rather human behavior issues from a widely varied though nevertheless integrated collection of states and mechanisms the integrated nature of which is determined by a form of clustering in the components contributions to the production of intelligent behavior This package of resources the cognitive system is the human self Among its elements the cognitive system includes a vast number of representations many subsets of which share their content On the author's view redundancy of content itself constitutes an important explanatory quantity the greater the extent of content redundancy among representations that co contribute to the production of an instance of behavior the more fluid the behavior In the course of developing and applying these views the author addresses questions about the content of mental representations extended cognition the value of knowledge and group minds
