Fox, William Bauldry, 2020-11-09 Advanced Problem Solving Using Maple™ Applied Mathematics Operations Research Business Analytics and Decision Analysis applies the mathematical modeling process by formulating, building, solving, analyzing, and criticizing mathematical models. Scenarios are developed within the scope of the problem solving process. The text focuses on discrete dynamical systems optimization techniques: single variable unconstrained optimization and applied problems and numerical search methods. Additional coverage includes multivariable unconstrained and constrained techniques. Linear algebra techniques to model and solve problems such as the Leontief model and advanced regression techniques including nonlinear logistics and Poisson are covered. Game theory, the Nash equilibrium, and Nash arbitration are also included. Features: The text's case studies and student projects involve students with real world problem solving. Focuses on numerical solution techniques in dynamical systems optimization and numerical analysis. The numerical procedures discussed in the text are algorithmic and iterative. Maple is utilized throughout the text as a tool for computation and analysis. All algorithms are provided with step-by-step formats. About the Authors: William P. Fox is an emeritus professor in the Department of Defense Analysis at the Naval Postgraduate School. Currently, he is an adjunct professor, Department of Mathematics, the College of William and Mary. He received his PhD at Clemson University and has many publications and scholarly activities, including twenty books and over one hundred and fifty journal articles. William C. Bauldry, Prof. Emeritus and Adjunct Research Prof. of Mathematics at Appalachian State University, received his PhD in Approximation Theory from Ohio State. Maple but also how and why it can be done The book also provides the necessary background for those who want the most of Maple or want to extend its built in knowledge Emphasis is on understanding the Maple system more than on factual knowledge of built in possibilities To this end the book contains both elementary and more sophisticated examples as well as many exercises The typical reader should have a background in mathematics at the intermediate level Andre Heck began developing and teaching Maple courses at the University of Nijmegen in 1987 In 1989 he was appointed managing director of the CAN Expertise Center in Amsterdam CAN Computer Algebra in the Netherlands stimulates and coordinates the use of computer algebra in education and research In 1996 the CAN Expertise Center was integrated into the Faculty of Science at the University of Amsterdam into what became the AMSTEL Institute The institute program focuses on the innovation of computer activities in mathematics and science education on all levels of education The author is actively involved in the research and development aimed at the integrated computer learning environment Coach for mathematics and science education at secondary school level

**Maple Animation** John F. Putz, 2018-07-31 There is nothing quite like that feeling you get when you see that look of recognition and enjoyment on your students faces Not just the strong ones but everyone is nodding in agreement during your first explanation of the geometry of directional derivatives If you have incorporated animated demonstrations into your teaching you know how effective they can be in eliciting this kind of response You know the value of giving students vivid moving images to tie to concepts But learning to make animations generally requires extensive searching through a vast computer algebra system for the pertinent functions Maple Animation brings together virtually all of the functions and procedures useful in creating sophisticated animations using Maple 7 8 or 9 and it presents them in a logical accessible way The accompanying downloadable resources provide all of the Maple code used in the book including the code for more than 30 ready to use demonstrations From Newton s method to linear transformations the complete animations included in this book allow you to use them straight out of the box Careful explanations of the methods teach you how to implement your own creative ideas Whether you are a novice or an experienced Maple user Maple Animation provides the tools and skills to enhance your teaching and your students enjoyment of the subject through animation
