Buttlar,2018-10-26 The development of smart cities is one of the most important challenges over the next few decades Governments and companies are leveraging billions of dollars in public and private funds for smart cities Next generation smart cities are heavily dependent on distributed smart sensing systems and devices to monitor the urban infrastructure The smart sensor networks serve as autonomous intelligent nodes to measure a variety of physical or environmental parameters They should react in time establish automated control and collect information for intelligent decision making In this context one of the major tasks is to develop advanced frameworks for the interpretation of the huge amount of information provided by the emerging testing and monitoring systems Data Analytics for Smart Cities brings together some of the most exciting new developments in the area of integrating advanced data analytics systems into smart cities along with complementary technological paradigms such as cloud computing and Internet of Things IoT The book serves as a reference for researchers and engineers in domains of advanced computation optimization and data mining for smart civil infrastructure condition assessment dynamic visualization intelligent transportation systems ITS cyber physical systems and smart construction technologies The chapters are presented in a hands on manner to facilitate researchers in tackling applications Arguably data analytics technologies play a key role in tackling the challenge of creating smart cities Data analytics applications involve collecting integrating and preparing time and space dependent data produced by sensors complex engineered systems and physical assets followed by developing and testing analytical models to verify the accuracy of results This book

covers this multidisciplinary field and examines multiple paradigms such as machine learning pattern recognition statistics intelligent databases knowledge acquisition data visualization high performance computing and expert systems The book explores new territory by discussing the cutting edge concept of Big Data analytics for interpreting massive amounts of data in smart city applications **Subject Guide to Books in Print** ,1975 Incident Response and Clearance in the State of Texas Steven D. Wohlschlaeger,Kevin N. Balke,1992 This report contains case study analyses of four motorist assistance patrol programs in the State of Texas In addition it contains discussions of the four incident response and clearnace strategies most often pursued by various agencies within the state 1 freeway corridor surveillance and control 2 traffic and incident management teams 3 fast removal policies and 4 motorist assistance patrols Of the four strategies discussed in this report motorist assistance patrols appear to offer the greatest opportunity for agencies to directly affect the duration of the response and clearance stages of an incident Many factors go into determining the physical structure and coverage area of a motorist assistance patrol a great deal of them political This report provides useful insight into the various political and organizational attributes that need to be considered when developing a motorist assistance program Regardless of their organizational structure or geographic coverage motorist assistance patrols provide an effective way to reduce incident response and clearance time and at the same time are a useful tool for improving an agency s public image *The Athenaeum* ,1862
