Cross-Border Resource Management Rongxing Guo, 2012-09-21 Rational exploitation and utilization of natural and environmental resources is more difficult in cross border areas than in areas under the jurisdiction of a single authority Moreover cross border resource management is constrained by the number of independent stakeholders involved The primary reasons for this come from the uneven spatial distribution of production factors as well as the non cooperative cross border mechanism resulting from two

or more political regimes Faced with cross border pollution policymakers tend to be shortsighted emphasizing the direct costs and benefits of their own regional development at the expenses of their neighbors In addition research institutions and international donor agencies have not paid full attention to the problems common in cross border areas Consequently cross border area studies remain a marginalized easily forgotten topic The main objectives of this book are to clarify how natural and human systems interact in cross border areas under conditions of uncertain imperfect information and in some circumstances irreversibility to identify and where possible quantify the various impacts of the border on the environmental activities in cross border areas to evaluate the costs and benefits of cross border cooperation in the exploitation and utilization of natural and environmental resources and to recommend measures in improving national and international legal and regulatory mechanisms for resource exploitation and environmental protection in cross border areas

Territorial Disputes and Conflict Management Rongxing Guo,2012-01-25 This book examines the problems of boundary demarcation and its impact on territorial disputes and offers techniques to manage and resolve the resulting conflicts Historically most civil conflicts and internal wars have been directly related to boundary or territorial disputes Cross border discord directly affects the sustenance and welfare of local populations often resulting in disease impoverishment and environmental damage as well as creating refugees Although the impact of territorial disputes is great they can often be settled through bilateral and sometimes multilateral agreements or international arbitration This book sets out to probe into the problems of existing techniques on boundary demarcation and to test their possible impacts on boundary and territorial disputes Various factors and their influences on cross border tensions are tested either qualitatively or quantitatively After close examination of dozens of the most significant cases the book presents various alternative solutions to the achievement of cross border cooperation in disputed territories An art of avoiding war is included within the book comprising six key schemes and five negotiating techniques The comparative advantages costs and benefits of each of these is analyzed and evaluated This book will help guide practitioners in territorial disputes and will be of interest to students of conflict management international security peace and conflict studies political violence and IR in general

Liquid Sovereignty: Post-Colonial Statehood of China and India in the New International Order Aleš Karmazin, 2023-12-22 This book project studies the variation of sovereignty in international order by analysing how the general model of sovereignty is localised in the political practice of two major non Western rising powers namely China and India It aims to investigate how the sovereignty of these states is constituted which includes the question of how sovereignty works and becomes constituted in specific contexts and cases that fall outside the discourses and positions of the so called Westphalian conservative absolutist sovereignty that is dominantly advocated by these two states on a global level The core of this project explores specific contested cases and situates them vis vis the broader approaches of China and India to sovereignty I specifically analyse four particular cases China s approach to sovereignty in relation to Hong Kong and Taiwan and India s approach to sovereignty in relation to Bhutan and Kashmir In doing so I will illustrate that sovereignty is a flexible and plastic phenomenon which can be intertwined with principles models or practices that are usually seen as divergent from or contradicting sovereignty for example those that derive from China s and India s imperial and colonial history

China's Regional Development and Tibet Rongxing Guo, 2015-10-16 This book pursues both narrative and analytic approaches to better understand China s spatial economic development and its implications for Tibet Accordingly this book focuses on Tibet an autonomous region in the far west of China as the subject of an in depth case study highlighting its unique geopolitical and socioeconomic features and external and boundary conditions China s great diversity in terms of physical geography resource endowment political economy and ethnicity and religion has posed challenges to the studies of spatial and interprovincial issues Indeed the Chinese nation is far too huge and spatially diverse to be easily interpreted The only feasible approach to analyzing it is therefore to divide it into smaller geographical elements so as to arrive at better insights into the country s spatial mechanisms and regional characteristics In this context the book combines analytic and narrative approaches

Toward an Ecosystem Approach for the Western Pacific Region: from Species-based Fishery Management Plans to Place-based Fishery Ecosystem Plans, 2009 **Applications of Space Techniques on the Natural Hazards in the MENA Region** Mashaël M. Al Saud, 2022-04-29 This book introduces a comprehensive understanding in the use of space techniques in natural hazards and risk management in the MENA Region. The book is based on different case studies from 25 MENA countries and will be useful in highlighting the issues from all aspects. In recent years, the number of natural hazard events has increased in the MENA Region. This is exacerbated by the changing climate and extreme climate events as well as a large increase in the population in this area. Disastrous events occur on a yearly basis, characterized by a vulnerability of physical processes. Floods, earthquakes, and mass movement result in severe damage to property and livelihoods and have devastating effects upon the environment. These events cause severe financial losses which on an annual basis can exceed millions of dollars. The predication assessment and monitoring approaches remain inadequate in managing these hazards and in mitigating their impacts, but with the development of space techniques and geo-information systems, these situations can now be better managed. The miscellany of satellite images with different spatial and temporal resolutions enable the detection of terrain features and provide indications of potential natural risks. This book will be of interest to stakeholders including field experts, academics, researchers, and decision makers. Prevention and Management of Soil Erosion and Torrential Floods Milutinović, Slobodan, Živković, Snežana, 2021-12-31 Soil erosion and torrential floods as destructive processes have serious implications on the economy, society, and environment. The severity of torrential floods lies in their sudden occurrence and high intensity, and hence the defense against torrential floods is very complex and demanding. Much remains to be discovered about soil erosion and torrential floods prevention, management, legislation, practices, and solutions worldwide. Thus, a better understanding of various prevention and management developments on soil erosion and torrential floods across different contexts is needed to assess their impact on sustainability, especially in the changed climate conditions. *Prevention and Management of Soil Erosion and Torrential Floods* investigates the problems of erosion and torrential floods and opportunities for the prevention, management, and control of these destructive processes. It highlights the importance of the prevention and management practices of soil erosion and torrential floods with respect to the exchange of knowledge and best practices. Covering topics such as dam maintenance, wind erosion, and natural disasters, it is ideal for environmentalists, environmental engineers, crisis response specialists, policymakers, government officials, academicians, students, and experts.
