Simple Steps to Data Encryption Peter Loshin, 2013-04-30. Everyone wants privacy and security online, something that most computer users have more or less given up on as far as their personal data is concerned. There is no shortage of good encryption software and no shortage of books, articles, and essays that purport to be about how to use it. Yet there is precious little for ordinary users who want just enough information about encryption to use it safely and securely and appropriately WITHOUT having to become experts in cryptography. Data encryption is a powerful tool if used properly. Encryption turns ordinary readable data into what looks like gibberish, but gibberish that only the end user can turn back into readable data again. The difficulty of encryption has much to do with deciding what kinds of threats one needs to protect against and then using the proper tool in the correct way. It's kind of like a manual transmission in a car: learning to drive with one is easy; learning to build one is hard. The goal of this title is to present just enough for an average reader to begin protecting his or her data immediately. Books and articles currently available about encryption start out with statistics and reports on the costs of data loss and quickly get bogged down in cryptographic theory and jargon, followed by attempts to comprehensively list all the latest and greatest tools and techniques. After step-by-step walkthroughs of the download and install process, there's precious little room left for what most readers really want: how to encrypt a thumb drive or email message or digitally sign a data file. There are terabytes of content that explain how cryptography works, why it's important, and all the different pieces of software that can be used to do it; there is precious little content available that couples concrete threats to data with explicit responses to those threats. This title fills that niche. By reading this title, readers will be provided with a step-by-step, hands-on guide that includes simple descriptions of actual threat scenarios, simple step-by-step instructions for securing data, how to use open source, time-proven, and peer-reviewed cryptographic software, easy-to-follow tips for safer computing, unbiased and platform-independent coverage of encryption tools and techniques, simple descriptions of actual threat scenarios, simple step-by-step instructions for securing data, how to use open source, time-proven, and peer-reviewed cryptographic software, easy-to-follow tips for safer computing, unbiased and platform-independent coverage of encryption tools and techniques.

Browser-based Manual Encryption Yuanzheng Song, 2014. Billions of web-based email and chat messages are sent over

the Internet every day However very few service providers support end to end privacy protection While providing security for these messages is technically feasible usability remains a challenge in this field Recent research attempts to hide security details like key management and encryption in order to make the system more usable However usability studies demonstrated that hiding these details may confuse the user and contribute to mistakes e g sending out an email in plaintext when the user thought it would be encrypted In an effort to increase trust and eliminate mistakes this thesis presents the design of a browser based manual encryption mechanism that supports automatic key management and manual encryption It also describes the Message Protector MP prototype An evaluations of MP is presented based on a user study conducted on the campus of BYU **ENCRYPT** University of Edinburgh.
