

Jessie used 3 bags to bring home the goldfish she won at the Fun Fair. She put the same number of goldfish in each bag. How many goldfish did she win?

I can use counters to show the groups.

8 goldfish in each bag

The counters show 3 groups of 8 goldfish.

You can use addition to join **equal groups**.

$$8 + 8 + 8 = 24$$

Multiplication is an operation that gives the total number when you join equal groups.

Factors are the numbers that are being multiplied. The **product** is the answer to a multiplication problem.

You can write **equations**.

An **unknown** is a symbol that stands for a number in an equation.

Addition equation:
 $8 + 8 + 8 = ?$
 $8 + 8 + 8 = 24$

Multiplication equation:
 $3 \times 8 = ?$
 $3 \times 8 = 24$

Jessie won 24 goldfish.

Convince Me! Model with Math Suppose Jessie won 5 bags of 8 goldfish. Draw a bar diagram and write an addition equation and a multiplication equation to represent the problem.

Help My People Lead! Joseph Lacroix, 2022-02-14 The desire to create this book began in 1985 when the words Help My People were whispered in the author s ear That began a thirty five year journey to determine what was meant by that phrase It happened once more about ten years later In the meantime the author and his wife as well as others proceeded to create a consulting firm that helped client organizations do a better job to create the kind of organization culture the frontline workers mostly said they wanted The consulting business prospered and the author thought for sure he was the one that the whisper was meant to help change in his dealings with his clients That all changed The word my shifted to the center of the RGBProZone a productivity zone comprised of groups that surround an individual capable of influencing others in a positive way because they think differently thus filling voids The meaning shifted from the one who had whispered in the author s ear that day in 1985 to everyone having influence over others backed by authority or reciprocal trust in the direction they were headed The my pertained to the husband and the wife the parent and children managers workers neighbors and those with authority and those without This book traces the step by step process used to begin where you are and never end It is the over thirty five year history of the author and his family friends associates and clients It begins anew with a new whisper that inspires Most importantly it contains a process that shifts the responsibility for change from the driver to include the driven From organization leadership to those who work together for mutual success Included is a ten stage one to three year time line to help create a new reality

Disabilities Silvia Lanfranchi,Barbara Carretti,2016-08-05 The last forty years of research have demonstrated that working memory WM is a key concept for understanding higher order cognition To give an example WM is involved in reading comprehension problem solving and reasoning but also in a number of everyday life activities It has a clear role in the case of atypical development too For instance numerous studies have shown an impairment in WM in individuals with learning disabilities LD or intellectual disabilities ID and several researchers have hypothesized that this can be linked to their difficulties in learning cognition and everyday life The latest challenge in the field concerns the trainability of WM If it is a construct central to our understanding of cognition in typical and atypical development then specific intervention to sustain WM performance might also promote changes in cognitive processes associated with WM The idea that WM can be modified is debated however partly because of the theoretical implications of this view and partly due to the generally contradictory results obtained so far In fact most studies converge in demonstrating specific effects of WM training i.e improvements in the trained tasks but few transfer effects to allied cognitive processes are generally reported It is worth noting that any

maintenance effects when investigated are even more meagre In addition a number of methodological concerns have been raised in relation to the use of 1 single tasks to assess the effects of a training program 2 WM tasks differing from those used in the training to assess the effects of WM training and 3 passive control groups These and other crucial issues have so far prevented any conclusions from being drawn on the efficacy of WM training Bearing in mind that the opportunity to train WM could have a huge impact in the educational and clinical settings it seems fundamentally important to shed more light on the limits and potential of this line of research The aim of the research discussed here is to generate new evidence on the feasibility of training WM in individuals with LD and ID There are several questions that could be raised in this field For a start can WM be trained in this population Are there some aspects of WM that can be trained more easily than others Can a WM training reduce the impact of LD and ID on learning outcomes and on everyday living What kind of training program is best suited to the promotion of such changes
